## ■ GENERAL DESCRIPTION

The **NJM2248** is 3-input video switch for video and audio signal. Two input terminals have sink-chip clamp function and so it is applied to fixed DC level of video signal. The other input terminal is transistor base input for luminant signal and so luminant level may be easily fixed by outer circuit. Its operating supply voltage range is 4.75 to 13V and bandwidth is 10MHz. Cross-talk is 70dB (at 4.43MHz).

## ■ APPLICATION

This IC requires 1MΩ resistance between INPUT and GND pin for clamp type input since the minute current causes an unstable pin voltage.

This IC requires 0.1 $\mu$ F capacitor between INPUT and GND, 1M $\Omega$  resistance between INPUT and GND for clamp type input at mute mode.
