3 I²C BUS SELECTION

Data transfers follow the usual I²C format; i.e. after the start condition (S), a 7-bit slave address is sent, followed by an eight-bit data direction bit (W). An 8-bit sub-address is sent to select a register, followed by an 8-bit data word to be included in the register. The IC's I²C bus decoder enables the automatic incrementation mode in write mode.
