# SC4216

# Very Low Input / Very Low Dropout 3 Amp Regulator With Enable

### **POWER MANAGEMENT**

### Description

The SC4216 is a high performance positive voltage regulator designed for use in applications requiring very low Input voltage and very low dropout voltage at up to 3 amperes. It operates with a Vin as low as 1.45V, with output voltage programmable as low as 0.5V. The SC4216 features ultra low dropout, ideal for applications where Vout is very close to Vin. Additionally, the SC4216 has an enable pin to further reduce power dissipation while shut down. The SC4216 provides excellent regulation over variations in line, load and temperature.

The SC4216 is available in an 8-Pin SOIC-EDP (Exposed Die Pad) package. The output voltage can be set via an external divider or to fixed settings of 0.5V and 1.2V depending on how the FB pin is configured.

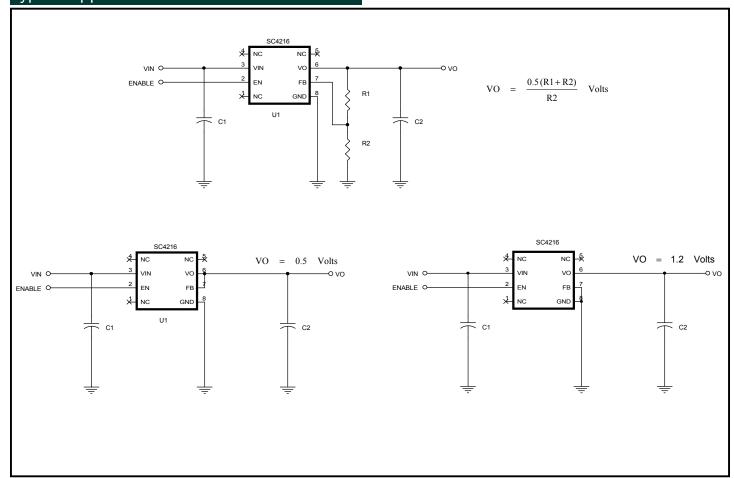

### **Features**

- ◆ Input voltage as low as 1.45V
- ◆ 500mV dropout @ 3A
- Adjustable output from 0.5V
- Over current and over temperature protection
- Enable pin
- ◆ 10µA quiescent current in shutdown
- Full industrial temperature range
- Available in 8-Pin SOIC-EDP, Lead-free package. Fully WEEE and RoHS compliant

# **Applications**

- ◆ Telecom/Networking cards
- Motherboards/Peripheral cards
- Industrial applications
- ◆ Wireless infrastructure
- Set top boxes
- Medical equipment
- Notebook computers
- Battery powered systems

### Typical Application Circuits

# Absolute Maximum Ratings

Exceeding the specifications below may result in permanent damage to the device, or device malfunction. Operation outside of the parameters specified in the Electrical Characteristics section is not implied.

Parameter	Symbol	Max	Units
Vin, EN, Vo, FB to GND		7	V
Power Dissipation	P <sub>D</sub>	Internally Limited	W
Thermal Resistance Junction to Ambient (1)	$\theta_{JA}$	36	°C/W
Thermal Resistance Junction to Case (1)	$\theta_{\sf JC}$	5.5	°C/W
Storage Temperature Range	T <sub>STG</sub>	-65 to +150	°C
Peak IR Reflow Temperature (10s to 30s)	T <sub>P</sub>	260	°C
ESD Protection Level (Human Body Model) (2)	V <sub>ESD</sub>	2	kV

#### Notes:

- (1) Calculated from package in still air, mounted to 3" x 4.5", 4 layer FR4 PCB with thermal vias under the exposed pad per JESD51 standards,
- (2) Tested according to JEDEC standard JESD22-A114-B.

### Recommended Operating Conditions

Performance is not guaranteed if the conditions below are exceeded.

Parameter	Symbol	Conditions	Min	Тур	Max	Units
Supply Voltage Range	V <sub>IN</sub>		1.45		5.5	V
Ambient Temperature Range	T <sub>A</sub>		-40		105	°C
Junction Temperature Range	T <sub>J</sub>		-40		125	°C
Max. Output Current	I <sub>OUTMAX</sub>		0		3	Α

### **Electrical Characteristics**

Unless specified:  $V_{EN} = V_{IN}$ ,  $V_{FB} = V_{O}$ ,  $V_{IN} = 1.45$ V to 5.5V,  $I_{O} = 10\mu$ A to 3A,  $T_{A} = 25^{\circ}$  C. Values in **bold** apply over the full operating temperature range.

Parameter	Symbol	Test Conditions	Min	Тур	Max	Units
VIN				1	ı	1
Quiescent Current	I <sub>Q</sub>	$V_{IN} = 3.3V, I_{O} = 0A$			3	mA
		V <sub>IN</sub> = 5.5V, V <sub>EN</sub> = 0V		10	50	μΑ
VO	•					
Output Voltage <sup>(1)</sup>	V <sub>o</sub>	$V_{IN} = V_{O} + 0.5V, I_{O} = 10mA$	-2%	Vo	+2%	V
(Fixed Voltage, V <sub>FB</sub> = 0)		$1.45V \le V_{IN} \le 5.5V, I_{O} = 10mA$	-3%		+3%	] V
Line Regulation <sup>(1)</sup>	REG <sub>(LINE)</sub>	I <sub>o</sub> = 10mA		0.2	0.4	%/V
Load Regulation <sup>(1)</sup>	REG <sub>(LOAD)</sub>	$10\text{mA} \le I_0 \le 3\text{A}, \ 1.6\text{V} \le V_N \le 5.5\text{V}$		0.25	1.0	%
Dropout Voltage(1)(2)		J. 500mA		75	150	>/
		I <sub>o</sub> = 500mA			200	mV
	V <sub>DO</sub>	I <sub>0</sub> = 1A		150	250	>/
					300	mV

### Electrical Characteristics (Cont.)

Unless specified:  $V_{EN} = V_{IN}$ ,  $V_{FB} = V_{O}$ ,  $V_{IN} = 1.45$ V to 5.5V,  $I_{O} = 10\mu$ A to 3A,  $T_{A} = 25^{\circ}$  C. Values in **bold** apply over the full operating temperature range.

Parameter	Symbol	Test Conditions	Min	Тур	Max	Units
VO (Cont.)					ı	-
Dropout Voltage(1)(2)		1 454		250	350	.,
		$I_o = 1.5A$			400	mV
		1 - 24		300	400	
		$I_0 = 2A$			500	mV
	.,			350	450	
	V <sub>DO</sub>	$I_{\odot} = 2.5A$			600	mV
				450	550	
		$I_0 = 3A$			700	mV
	-			400	500	
	I	$I_{O} = 3A, 1.6V \le V_{IN} \le 5.5V$			650	mV
Minimum Load Current(3)	I <sub>o</sub>	$V_{IN} = V_{O} + 0.5V$			10	μA
Current Limit	I <sub>CL</sub>		3.5	4.5	5.0	А
Feedback						
Reference Voltage <sup>(1)</sup>	V <sub>REF</sub>	$V_{IN} = 3.3V, V_{FB} = V_{OUT}, I_{O} = 10mA$	0.495	0.5	0.505	
		Full $I_{OUT}$ , and $V_{IN}$ Range	0.490		0.510	V
Feedback Pin Current <sup>(4)</sup>	I <sub>ADJ</sub>	$V_{FB} = V_{REF}$		80	200	nA
Feedback Pin Threshold (5)	V <sub>TH(FB)</sub>		0.05	0.16	0.40	V
EN						
Enable Pin Current	I <sub>EN</sub>	V <sub>EN</sub> = 0V, V <sub>IN</sub> = 3.3V		1.5	10	μΑ
Enable Pin Threshold	V <sub>IH</sub>	V <sub>IN</sub> = 3.3V	1.6			V
	V <sub>L</sub>	V <sub>IN</sub> = 3.3V			0.4	
Over Temperature Protection	on					
High Trip level	T <sub>HI</sub>			160		°C
Hysteresis	T <sub>HYST</sub>			10		°C

#### Notes:

- (1) Low duty cycle pulse testing with Kelvin connections required.
- (2)
- $V_{DO} = V_{IN} V_{O}$  when  $V_{O}$  decreases by 1.5% of its nominal output voltage with  $V_{IN} = V_{O} + 0.8V$ . Required to maintain regulation. Voltage set resistors R1 and R2 are usually utilized to meet this requirement. (3)
- (4) Guaranteed by design.
- (5)When V<sub>FR</sub> exceeds this threshold, the "Sense Select" switch disconnects the internal feedback chain from the error amplifier and connects  $V_{\rm FB}$  instead.

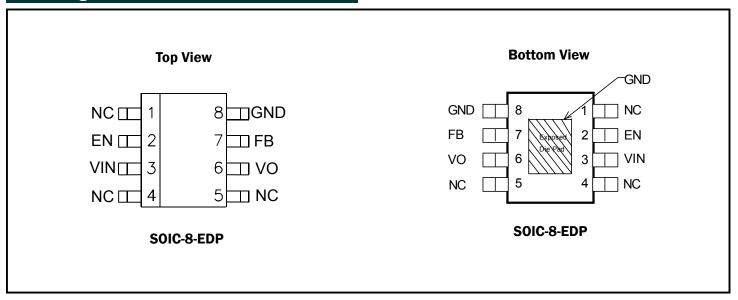

Ordering Information			
Part Number	Package	Temp. Range (T <sub>J</sub> )	
SC4216STRT <sup>(1)(2)</sup>	SOIC-8-EDP -40 to +125 °C		
SC4216EVB (3)	Evaluation Board		

#### Notes:

- (1) Only available in tape and reel packaging. A reel contains 2500 devices.
- (2) Lead-free product. Fully WEEE and RoHS compliant.

# Pin Configuration

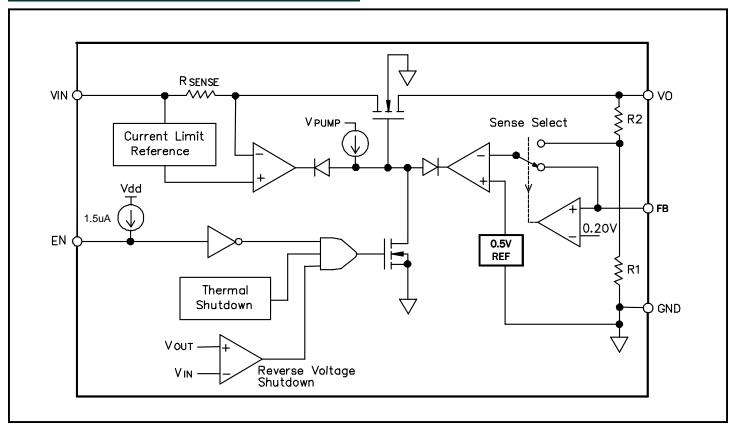

# Pin Descriptions

Pin Name	Pin Desciption
EN	Enable Input. Pulling this pin below 0.4V turns the regulator off, reducing the quiescent current to a fraction of its operating value. The device will be enabled if this pin is left open. Connect to VIN if not being used.
VIN	Input voltage. For regulation at full load, the input to this pin must be between (VO+ 0.5V) and 5.5V. Minimum VIN = 1.45V. A large bulk capacitance should be placed closely to this pin to ensure that the input supply does not sag below 1.45V. Also a minimum of 4.7uF ceramic capacitor should be placed directly at this pin.
VO	The pin is the power output of the device. A minimum of 10uF capacitance should be placed directly at this pin.
FB	When this pin is grounded, an internal resistor divider sets the output voltage to 1.2V. If connected to the Vo pin, the output voltage will be set at 0.5V. If external feedback resistors are used, the output voltage will be (See Application Circuits on page 1): $VO = \frac{0.5(R1+R2)}{R2}  Volts$
GND	Reference ground.
THERMAL PAD	Pad for heatsinking purposes. Connect to ground plane using multiple vias.

# Applications Information

#### Introduction

The SC4216 is intended for applications where high current capability and very low dropout voltage are required. It provides a very simple, low cost solution that uses very little pcb real estate. Additional features include an enable pin to allow for a very low power consumption standby mode, and a fully adjustable output.

#### **Component Selection**

Input capacitor: A large bulk capacitance  $\geq 10\mu\text{F/A}$  (output load) should be closely placed to the input supply pin of the SC4216 to ensure that Vin does not sag below 1.45V. Also a minimum of 4.7 $\mu\text{F}$  ceramic capacitor is recommended to be placed directly next to the Vin pin. This allows for the device being some distance from any bulk capacitance on the rail. Additionally, input droop due to load transients is reduced, improving load transient response. Additional capacitance may be added if required by the application.

#### Output capacitor: A minimum bulk capacitance of

 $\geq 10 \mu F/A$  (output load), along with a 0.1  $\mu F$  ceramic decoupling capacitor is recommended. Increasing the bulk capacitance will improve the overall transient response. The use of multiple lower value ceramic capacitors in parallel to achieve the desired bulk capacitance will not cause stability issues. Although designed for use with ceramic output capacitors, the SC4216 is extremely tolerant of output capacitor ESR values and thus will also work comfortably with tantalum output capacitors.

**Noise immunity:** in very electrically noisy environments, it is recommended that  $0.1\mu F$  ceramic capacitors be placed from IN to GND and OUT to GND as close to the device pins as possible.

**Internal voltage selection:** By connecting the FB pin to GND, an internal resistor divider will regulate the output voltage to 1.2V. If the FB pin is connected directly to the VO pin, the output voltage will be regulated to the 0.5V internal reference.

**External voltage selection resistors:** The use of 1% resistors, and designing for a current flow  $\geq$  10µA is recommended to ensure a well regulated output (thus R2  $\leq$  50k $\Omega$ ).

**Enable:** Pulling this pin below 0.4V turns the regulator off, reducing the quiescent current to a fraction of its operating value. A pull up resistor up to 400k0hms should be connected from this pin to the VIN pin in application where supply voltages of Vin < 1.9V is required. For applications with higher voltages than 1.9V, EN pin could be left open or connected to VIN.

#### **Thermal Considerations**

The power dissipation in the SC4216 is approximately equal to the product of the output current and the input to output voltage differential:

$$P_D \approx (VIN - VOUT) \bullet I_O$$

The absolute worst-case dissipation is given by:

$$\mathsf{P}_{\mathsf{D}(\mathsf{MAX}\,)} = \left(\mathsf{VIN}_{\,(\mathsf{MAX}\,)} - \mathsf{VOUT}_{\,(\mathsf{MIN}\,)}\right) \bullet \mathsf{I}_{\mathsf{D}(\mathsf{MAX}\,)} + \mathsf{VIN}_{\,(\mathsf{MAX}\,)} \bullet \mathsf{I}_{\mathsf{D}(\mathsf{MAX}\,)}$$

For a typical scenario,  $V_{IN}$  = 3.3V ± 5%,  $V_{OUT}$  = 2.8V and  $I_{O}$  = 1.5A, therefore:

$$V_{IN(MAX)}$$
 = 3.465V,  $V_{OUT(MIN)}$  = 2.744V and  $I_{Q(MAX)}$  = 1.75mA,

Thus 
$$P_{D(MAX)} = 1.09W$$
.

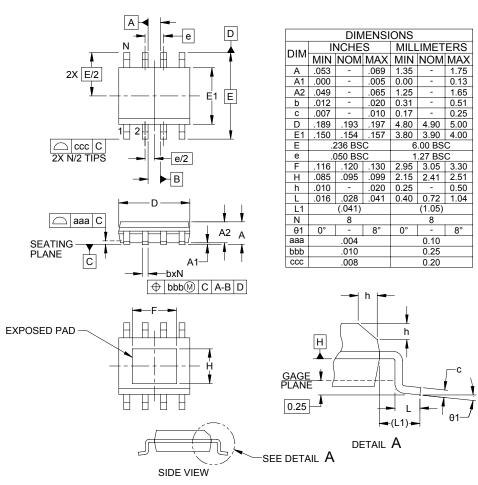

Using this figure, and assuming  $T_{A(MAX)} = 70\,^{\circ}$  C, we can calculate the maximum thermal impedance allowable to maintain  $T_{\perp} \le 150\,^{\circ}$  C:

$$R_{TH(J-A)(MAX)} = \frac{\left(T_{J(MAX)} - T_{A(MAX)}\right)}{P_{D(MAX)}} = \frac{(150 - 70)}{1.09} = 73.4^{\circ} \text{C / W}$$

This should be achievable for the SOIC-8EDP package using pcb copper area to aid in conducting the heat away, such as one square inch of copper connected to the exposed die pad of the device. Internal ground/power planes and air flow will also assist in removing heat. For higher ambient temperatures it may be necessary to use additional copper area.
