

### Features

- Peak pulse power: 600 W (10/1000  $\mu$ s)
- Stand off voltage range: from 5 V to 188 V
- Uni and bidirectional types
- Low clamping factor
- Fast response time
- JEDEC registered package outline

### Description

The SMBJ series are TRANSIL™ diodes designed specifically for protecting sensitive equipment against transient overvoltages.

Transil diodes provide high overvoltage protection by clamping action. Their instantaneous response to transient overvoltages makes them particularly suited to protect voltage sensitive devices such as MOS Technology and low voltage supplied IC's.

1. Pulse test : tp < 50ms.
2.  $V_{BR} = \alpha T * (T_{amb} - 25) * V_{BR}(25^{\circ} C)$ .
3.  $V_R = 0 V$ ,  $F = 1 MHz$ . For bidirectional types, capacitance value is divided by 2.

Figure 2. Peak pulse power versus exponential pulse duration.

Figure 3. Clamping voltage versus peak pulse current.

Note: The curves of figure 3 are specified for a junction temperature of 25° C before surge. The given results may be extrapolated for other junction temperatures by using the following formula :

$$\Delta VBR = \alpha T * [T_{amb} - 25] * VBR(25^\circ C)$$

For intermediate voltages, extrapolate the given results.

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).
