Logic/Analog Signals

Parameter	Conditions/Description
Remote Control	Remote On/Off function is controlled using pins REMO(2) and RTN(1) on logic connector CN4, in order to use the Remote On/Off function first connect jumper JP1 between pins 2 and 3 on JP1 on the power supply. A supply voltage of 3-15Vdc between the REMO(2) and RTN(1) pin on CN4 will activate the Remote On. Please note RTN(1) pin on CN4 is not in contact with -Vout or RTN(4) but can be shorted with no problems.
Power Good	Goes high 100-500 mS after the output reaches regulation. It goes low at least 1mS before loss of regulation.
Remote Sense	Remote sense terminals force regulation to where sensing terminals are connected.
RTN	Please note RTN(1) pin on CN4 is not in contact with -Vout or RTN(4) but can be shorted with no problems.

Fan Drive

Parameter	Conditions/Description
FanDrive	Provides 12V, 250mA to drive a DC fan. Minimum load is required on the power supply output for the voltage on the fan drive to be in regulation.

Protection Circuits

Parameter	Conditions/Description
Overload	Current limiting starts at 105% of the rated output current and recovers automatically.
Output Over-voltage	Output is protected against overvoltage. Unit shuts down at 115-140% of rated voltage.
Short Circuit	Protected. Long term short circuit may reduce reliability.
Input Under-voltage	Power supply shuts down when ac input is under 80 VAC. When ac line reappears over 86 +/- 5 VAC, the power supply restarts automatically.
Over temp.	Power supply shuts down when temperature is in excess of 85 °C. Auto recovery.
