

TPA3003D2EVM

***3-W Stereo Class-D Audio Power Amplifier
With DC Volume Control***

User's Guide

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

EVM IMPORTANT NOTICE

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation kit being sold by TI is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not considered by TI to be fit for commercial use. As such, the goods being provided may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety measures typically found in the end product incorporating the goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may not meet the technical requirements of the directive.

Should this evaluation kit not meet the specifications indicated in the EVM User's Guide, the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Please be aware that the products received may not be regulatory compliant or agency certified (FCC, UL, CE, etc.). Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive**.

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein**.

Please read the EVM User's Guide and, specifically, the EVM Warnings and Restrictions notice in the EVM User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact the TI application engineer.

Persons handling the product must have electronics training and observe good laboratory practice standards.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

Texas Instruments
Post Office Box 655303
Dallas, Texas 75265

EVM WARNINGS AND RESTRICTIONS

It is important to operate this EVM within the supply voltage range specified in this user's guide. The supply voltage range should be 8.5 V to 14 V, and supply current (I_{CC}) should be no greater than 1.6 A maximum.

Operating outside the specified supply voltage range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the supply voltage and current range, please contact a TI field representative prior to applying power to the device.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than 60°C. The EVM is designed to operate properly with certain components above 60°C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

Information About Cautions and Warnings

This book may contain cautions and warnings.

This is an example of a caution statement.

A caution statement describes a situation that could potentially damage your software or equipment.

This is an example of a warning statement.

A warning statement describes a situation that could potentially cause harm to you.

The information in a caution or a warning is provided for your protection. Please read each caution and warning carefully.

FCC Warning

This equipment is intended for use in a laboratory test environment only. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to subpart J of part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

Electrostatic Sensitive Devices

This EVM contains components that can potentially be damaged by electrostatic discharge. Always transport and store the EVM in its supplied ESD bag when not in use. Handle using an antistatic wristband. Operate on an antistatic work surface. For more information on proper handling, refer to SSYA008.

Introduction

This chapter provides a brief description of the TPA3003D2EVM.

Topic	Page
1.1 Description	1-2
1.2 TPA3003D2EVM Specifications	1-3

1.1 Description

The TPA3003D2 audio power amplifier evaluation module is a 3-watt-per-channel class-D stereo audio power amplifier complete with a small number of external components mounted on a circuit board that measures approximately 2-1/4 inches by 1-3/4 inches (Figure 1-1 and Figure 1-2).

Figure 1-1. The TI TPA3003D2 Audio Power Amplifier EVM (Top View)

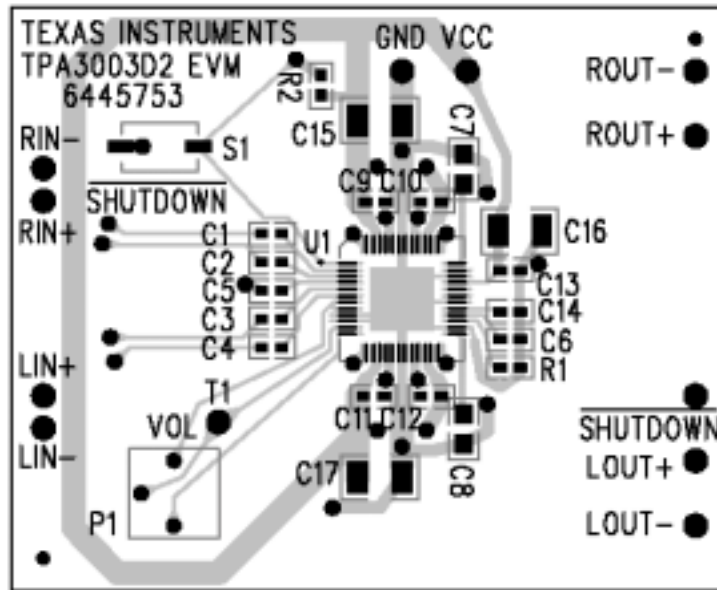

Figure 1-2. The TI TPA3003D2 Audio Power Amplifier EVM (Bottom View)

1.2 TPA3003D2EVM Specifications

Supply voltage range, V_{CC}	8.5 V to 14 V
Input voltage range, V_I (VOL, MUTE, $\overline{\text{FADE}}$)	0 V to 5.5 V
V_I ($\overline{\text{SD}}$)	0 V to $V_{CC} + 0.3$ V
V_I (RINN, RINP, LINN, LINP)	0 V to 7 V
Supply current, I_{CC}	1.6 A Max
Continuous output power per channel, P_O : 8 Ω , $V_{CC} = 12$ V, THD+N = 10%	3 W
Minimum load impedance, R_L	8 Ω

Operation

This chapter describes how to operate the TPA3003D2EVM.

Topic	Page
2.1 Quick Start List for Stand-Alone Operation	2-2

2.1 Quick Start List for Stand-Alone Operation

Follow these steps to use the TPA3003D2EVM stand-alone or when connecting it into existing circuits or equipment. Connections to the EVM module header pins can be made via individual sockets, wire-wrapping, or soldering to the pins, either on the top or the bottom of the module circuit board.

2.1.1 Power Supply

- 1) Ensure that all external power sources are set to OFF.
- 2) Connect an external regulated power supply, set between 8.5 V and 14 V, to the module VCC and GND pins, taking care to observe marked polarity.

2.1.2 Inputs and Outputs

- 1) Ensure that the audio signal source level adjustments are set to minimum.
- 2) Connect the right and left positive audio source to the module RIN+ and LIN+ pins, respectively. Connect the right and left negative audio source to the module RIN– and LIN– pins, respectively.
- 3) If using single ended inputs, ground the LIN+ and RIN+ pins and connect the signal source to RIN– and LIN–.

Note:

If RIN+ and LIN+ on the EVM are connected to ground, the RINP and LINP on TPA3003D2 IC are ac grounded through C2 and C3. For the best noise performance, directly connect the input side (left side) of C2 and C3 to the AGND side of C5 with a short trace or solder bridge.

2.1.3 Evaluation Module Preparations

Adjust the signal source level as needed.

2.1.4 Control Inputs

Note:

Refer to the TPA3003D2 data sheet for logic threshold voltage ratings.

- 1) **SHUTDOWN:** This pin is active low. A low on this pin shuts down the amplifier; a high on this pin places the amplifier in the active state. Leaving this pin floating also allows normal amplifier operation. Holding down switch S1 places the amplifier in the shutdown state. Releasing S1 returns the amplifier to the active state. The absolute maximum voltage on this terminal is $V_{CC} + 0.3$ V.
- 2) **MUTE:** This pin controls the stereo class-D outputs of the amplifier (ROUT+, ROUT–, LOUT+, and LOUT–). This pin is active high. A *high* on this pin causes the outputs (OUT+ and OUT–) to instantaneously ramp down in volume, which mutes the device. A *low* on this pin causes the outputs (OUT+ and OUT–) to instantaneously ramp up to volume. The absolute maximum voltage on this pin is 5.5 V.

Note:

Do not leave the MUTE pin floating. The TPA3003D2EVM connects the MUTE pin to ground. If the MUTE function is to be utilized on the EVM, unsolder the pin and lift it off the module circuit board. Solder a wire to the pin and apply the necessary voltage for the desired function.

- 3) **FADE**: This pin controls the stereo class-D outputs of the amplifier (ROUT+, ROUT-, LOUT+, and LOUT-) during the four states of the device (power on, power off, coming out of shutdown, and going into shutdown). This pin is active low. A low on this pin causes the outputs (OUT+, and OUT-) to slowly ramp up to volume, when the device is powered on or when the device comes out of the shutdown state. A low also causes the outputs to slowly ramp down in volume when the device goes into shutdown. A high on this pin causes the outputs (OUT+, and OUT-) to instantaneously ramp up to volume when the device is powered on or when the device comes out of the shutdown state. A high also causes the outputs to instantaneously ramp down in volume when the device goes into shutdown. The absolute maximum voltage on this terminal is 5.5 V.

Note:

Do not leave the FADE pin floating. The TPA3003D2EVM connects the FADE pin to ground. If the fade function is to be disabled, unsolder the pin and lift it off the module circuit board. Solder a wire to the pin and apply the necessary voltage for the desired function.

2.1.5 Power Up

- 1) Verify correct voltage and input polarity and set the external power supply to ON. The EVM begins operation.
- 2) Adjust the signal source level as needed.

Adjusting the Speaker Volume

- 3) Adjust the speaker (connected across OUT+ and OUT-) volume as needed by turning the P1 potentiometer in the clockwise direction to increase the volume. Conversely, turn P1 in the counterclockwise direction to decrease the volume. Refer to Table 3-2 in the Reference section for volume control settings.

Test Pins for Speaker Volume
