MAX9652 Evaluation Kit

Evaluates: MAX9652

General Description

The MAX9652 evaluation kit (EV kit) is a fully assembled and tested surface-mount PCB that contains the MAX9652 triple-channel, video-filter amplifier for high-definition television (HDTV) applications. The filter's passband is typically 42MHz. The video inputs on the EV kit are AC-coupled; the video outputs can be AC- or DC-coupled. In addition, the MAX9652 video inputs are terminated with 75Ω and the video outputs have a 75Ω back termination resistor. The EV kit operates from a single 3.3V DC power supply.

Features

- **Single 3.3V Supply Operation**
- **Output Buffer with a 2V/V Gain**
- **High-Definition Television Video Filter**
- **AC-Coupled Inputs**
- **Standard 75Ω Input/Output Terminations**
- **Surface-Mount Components**
- **Fully Assembled and Tested**

Ordering Information

PART	TYPE
MAX9652EVKIT+	EV Kit

+Denotes lead-free and RoHS compliant.

Component List

DESIGNATION	QTY	DESCRIPTION
C1, C2, C3, C9	4	0.1µF ±10%, 16V X7R ceramic capacitors (0603) Murata GRM188R71C104K
C4, C7, C8	0	Not installed, ceramic capacitors (0603)
C10	1	10µF ±10%, 6.3V X5R ceramic capacitor (0603) Murata GRM21BR60J106K

DESIGNATION	QTY	DESCRIPTION
PB_INPUT, PB_OUTPUT, PR_INPUT, PR_OUTPUT, Y_INPUT, Y_OUTPUT	6	75Ω BNC PCB vertical-mount connectors
R1–R6	6	75Ω ±5% resistors (0603)
R7, R8, R9	3	0Ω ±5% resistors (0603)
U1	1	3-channel high-definition video filter (8 SO) Maxim MAX9652ASA+
—	1	PCB: MAX9652 Evaluation Kit+

Note: *Indicate that you are using the MAX9652 when contacting this component supplier.*

MAX9652 Evaluation Kit

Quick Start

Recommended Equipment

Before beginning, the following equipment is needed:

- 3.3V DC power supply (VDD) capable of 50mA
- Video signal generator (e.g., Tektronix TG-700 or similar)
- The appropriate video measurement equipment (e.g., Tektronix VM5000)

Procedure

The MAX9652 EV kit is fully assembled and tested. Follow the steps below to verify board operation:

1) Connect the outputs of the video signal generator to the Y_INPUT, PB_INPUT, and PR_INPUT BNC connectors on the MAX9652 EV kit.
2) Connect the Y_OUTPUT, PB_OUTPUT, AND PR_OUTPUT BNC connectors on the EV kit to the input of the video measurement equipment.
3) Connect the power-supply ground to the GND pad on the EV kit.
4) Connect the 3.3V supply to the VDD pad on the EV kit.
5) Set the video signal generator for the desired video input signals.
6) Turn on the power supply and enable the video signal generator.
7) Analyze the video output signal.

Detailed Description of Hardware

The MAX9652 EV kit is a fully assembled and tested surface-mount PCB that contains the MAX9652 triple-channel, video-filter amplifier and buffer for HDTV applications. The MAX9652 filter has ±1dB passband out to 42MHz and 50dB attenuation at 109MHz. The MAX9652 EV kit has three input channels to accept a full set of component video input signals.

The MAX9652 EV kit uses 0.1µF ceramic capacitors to AC-couple the video input signals to the MAX9652. The input capacitor stores a DC level such that the outputs are clamped to the appropriate DC voltage level. All video inputs have a 75Ω termination to ground. The MAX9652 EV kit video outputs can be DC- or AC-coupled. By default, 0Ω resistors are installed on R7, R8, R9, and C4, C7, and C8 are open; each of the outputs are configured to drive DC-coupled video loads. To configure the outputs to drive the AC-coupled video loads, remove R7, R8, and R9, and install the 220µF capacitors on C4, C7, and C8.
