

TPS65162EVM-278

The TPS65162EVM-278 evaluation module operates from a 8-V to 14-V input rail and provides the three bias-supply voltages (Vs, VGH, and VGL) and a logic-supply voltage (3.3 V) that are required for television and monitor TFT-LCD panels. This device also provides two operational amplifiers to generate the VCOM supply rail. The TPS65162EVM-278 has one boost converter with an integrated low-side FET, one negative charge-pump controller requiring external Schottky diodes, and one fully integrated positive charge pump for TFT-LCD bias supply. External passive components to support the boost converter include rectifying diode, inductors, and capacitors. External components for the charge pumps include capacitors and switching diodes. One nonsynchronous buck converter with external Schottky diode make up the logic supply.

1 Introduction

This section contains background information for the TPS65162EVM-278 evaluation module (EVM).

1.1 Specification

Table 1 provides a summary of the TPS65162EVM-278 performance specifications. All specifications are given for an ambient temperature of 25°C.

Table 1. Performance Specification Summary

Specification	Voltage Range (V)			Current Range (mA)		
	Minimum	Typical	Maximum	Minimum	Typical	Maximum
VIN	8	12	14		1500	
Vs	14.7	15	15.3		500	
VGL	-5.15	-5	-4.85		33	
VGH	25.0	27 ⁽¹⁾	29.0		50	
Vlogic		3.3			1500	

⁽¹⁾ Assumes that SUP = V_S.

1.2 Modifications

The primary goal of this EVM is to facilitate user evaluation of the TPS65162 in a power-supply application for a typical large TFT display. To facilitate user customization of the EVM, the board was designed with devices having 0805 or larger footprints. A production-optimized implementation would likely occupy less total board space.

1.2.1 Customizing Power Supply

The user can change each rail's regulated output voltage by changing the appropriate feedback resistors per the device data sheet ([SLVS771](#)). The user is responsible for not exceeding each output's maximum voltage specifications. In addition, alternate capacitors, inductors, and/or diodes can be used. When using alternate capacitors, ensure that at least the minimum recommended capacitance per the data sheet is used, and that the capacitor voltage rating is appropriate for the application. The switching converters are designed to be used with ceramic output capacitors. Using nonceramic output capacitors with significantly large equivalent series resistances (ESR) can result in larger output ripple or unstable operation of the inductive switching converters. Each charge pump's flying and output capacitors must be ceramic capacitors. When selecting an alternate inductor, use the data-sheet design equations to ensure that an appropriate inductance value is selected, and that the inductor current rating is appropriate for the desired output current. Using an inductor with larger dc resistance results in lower efficiency. When using alternate diodes, ensure that the diode is rated for both the expected peak current and expected power per the data-sheet design equations.

Enable 1 (J6) turns on the Vlogic converter. When the power-good threshold of this converter is reached, DLY1, set by C14, controls the delay time to turn off the negative charge-pump VGL. C14 can be changed to adjust this delay. Enable 2 (J7) turns on the positive charge-pump VGH. DLY2, set by C24, controls the delay time to turn on the positive charge pump from the Vlogic-good threshold or EN2 high. C24 can be changed to adjust the delay.

1.2.2 Input to Output Isolation

The nonsynchronous boost converter has a path from input to output, VIN to Vs, through the external switching diode D3. Transistor Q2 acts as an isolation switch for this path once the device is turned off.

2 Setup and Test Results

This section explains the input, output, and jumper connections of the TPS65162EVM-278. It also describes how to set up test equipment for evaluating the EVM and provides test results.

2.1 Connections and Jumpers

The DEFAULT jumper settings are required for the EVM to operate within the specifications of [Table 1](#).

Table 2. Default Jumper Settings

Jumper	Default Setting
J6 – Enable 1	(OFF) GND
J7 – Enable 2	(OFF) GND
J8 – Freq Control	(750 khz) Vin
J9 – Enable Gate Voltage Shaping	(ON) Vin
J10 – Control Gate Voltage Shaping	(ON) Vin

J1-VIN/GND:	Input power supply and ground connection, Vin range 8 V to 14 V
J2-Vs/GND:	Output connection for the main boost converter and ground return connection
J3-VLOGIC/GND:	Output voltage for 3.3-V buck converter and ground return connection
J4-VGH/GND:	Output connection for the internal high-voltage switch and ground return connection
J5-VGL/GND:	Output voltage for negative charge pump and ground return connection
J6–Enable 1:	Enable for VLOGIC converter, GND = OFF, VIN = ON
J7–Enable 2:	Enable for positive charge pump, GND = OFF, VIN=ON
J8–Freq Control:	Frequency Selection, GND = 750 kHz, Vin = 500 kHz
J9–Enable Gate Voltage Shaping:	Gate Voltage Shaping, GND = OFF, VIN = ON
J10–Control Gate Voltage Shaping:	Control Voltage Shaping, GND = OFF, VIN = ON
J11-OPAMP 1:	Opamp 1 input, output, gnd, and VS connection
J12-OPAMP 2:	Opamp 2 input, output, gnd, and VS connection
J13-NEG1:	Opamp 1 connection negative input and output
J14-NEG2:	Opamp 2 connection negative input and output
J15-GND/REFERENCE :	VGL reference voltage and ground return
J16-VS test point:	Test point for VS
J17-VGH test point:	Test point for VGH
J18-VGL test point:	Test point for VGL
J19-VLOGIC test point:	Test point for VLOGIC

2.2 Recommended Test Setup

Before turning on the power supply, ensure that jumpers J6--J10 are in their default positions.

Connect a power supply rated at 3 A or more to provide 8 V to 14 V to J1. Do not exceed 14 V on J1. In order to avoid voltage drop through the input power supply line, connect heavy-gauge, twisted-pair wire to J1. The output voltages can be monitored by voltmeters and/or an oscilloscope with standard high-impedance voltage probes.

The output voltages reach their respective regulation voltages per [Table 1](#) after the appropriate soft-start times and relative delays. Resistive or electronic loads can be attached to output J2 for Vs and J3 for Vlogic. Only resistive loads can be attached to outputs J4 for VGH and J5 for VGL. Exceeding an output load specified in [Table 1](#) results in the output voltage falling out of regulation.

Use EN1 (J6) to turn on the buck converter (VLOGIC) and negative charge pump (VGL). EN2 is used to turn on the boost converter (Vs) and positive charge pump (VGH). With EN2 (J7) set to the on position, EN1 controls on/off for all voltages.

2.3 Test Results

Test results using the TPS65162EVM-278 are shown in [Figure 1](#).

Figure 1. Start-up Waveform

3 Board Layout

This section provides board layout recommendations as well as illustrations of the EVM board layers.

3.1 Board Layout Recommendations

For information regarding PC board layout, see the TPS65162 data sheet ([SLVS760](#)).

3.2 Board Layers

The following illustrations show the top assembly and top and bottom layers of the TPS65162EVM-278.

- Notes: 1. These assemblies are ESD sensitive, ESD precautions shall be observed.
2. These assemblies must be clean and free from flux and all contaminants. Use of no clean flux is not acceptable.
3. These assemblies must comply with workmanship standards IPC-A-610 Class 2.
4. Ref designators marked with an asterisk (***) cannot be substituted. All other components can be substituted with equivalent MFG's components.

EVALUATION BOARD/KIT IMPORTANT NOTICE

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive.**

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.**

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit www.ti.com/esh.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

EVM WARNINGS AND RESTRICTIONS

It is important to operate this EVM within the input voltage range of 8 V to 14 V and the output voltage range of 25 V to 29 V (VGH).

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than 85°C. The EVM is designed to operate properly with certain components above 85°C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
