RF2381

PCS/CELLULAR TDMA/CDMA/W-CDMA LINEAR VARIABLE GAIN AMPLIFIER

RoHS Compliant & Pb-Free Product Package Style: SOT23-6

Features

- 50dB Linear Gain Control Range
- 22dB Maximum Gain
- Single 2.7V to 3.3V Supply
- 35 mA Supply Current
- High Linearity

Applications

- CDMA PCS/Cellular Handsets
- TDMA PCS/Cellular Handsets
- W-CDMA Handsets

Functional Block Diagram

Product Description

The RF2381 is a linear variable gain amplifier suitable for use in TDMA and CDMA systems in the cellular or PCS band and for W-CDMA systems. The features of this device include linear gain control, high gain, and high linearity. The IC is manufactured on an advanced Gallium Arsenide Heterojunction Bipolar Transistor (GaAs HBT) process and is featured in an industry-standard miniature 6-lead plastic SOT package.

Absolute Maximum Ratings

Parameter	Rating	Unit
Supply Voltage	0 to +5.0	V_{DC}
DC Current	100	mA
Operating Ambient Temperature	-30 to +85	°C
Storage Temperature	-40 to +150	°C

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2002/95/EC (at time of this document revision).

Interface Schematic Pin **Function** Description **RF OUT** RF output pin. This pin is DC-coupled and requires $\ensuremath{\text{V}_{\text{CC}}}$ through a bias 1 inductor sized accordingly to provide a high pass transformation with a series capacitor. Ground connection. For best performance, keep traces physically short 2 **GND** and connect immediately to ground plane. Analog gain control pin. This pin controls the gain of the IC. Minimum gain 3 GC occurs at V_{GC} < 0.4V and maximum gain is achieved with V_{GC} = 2.0V. 50dB of linear gain control with little variation of input P_{1dB} is available. RF input pin. This pin is DC-coupled. **RFIN** 4 5 **GND** Ground connection. For best performance, keep traces physically short and connect immediately to ground plane. 6 **VCC** Power supply. This pin should be connected to a regulated supply and requires a series inductor and bypass capacitor. Voltage is supplied through this pin to the first stage collector; this voltage also controls the bias. Gain may be tuned by adjusting the value of the feed inductor.
