

Product Description

Sirenza Microdevices' **XD010-24S-D2F** 12W power module is a robust 2-stage Class A/AB amplifier module for use in the driver stages of CDMA RF power amplifiers. The power transistors are fabricated using Sirenza's latest, high performance LDMOS process. This unit operates from a single voltage and has internal temperature compensation of the bias voltage to ensure consistent performance over the full temperature range. It is internally matched to 50 ohms.

Pin Out Description

Pin #	Function	Description
1	RF Input	Module RF input. Care must be taken to protect against video transients that may damage the active devices.
2	V _{D1}	This is the bias feed for the 1 st stage of the amplifier module. The gate bias is temperature compensated to maintain constant current over the operating temperature range. See Note 1.
3,4	V _{D2}	This is the bias feed for the 2 nd stage of the amplifier module. The gate bias is temperature compensated to maintain constant current over the operating temperature range. See Note 1.
5	RF Output	Module RF output. Care must be taken to protect against video transients that may damage the active devices.
Flange	Gnd	Exposed area on the bottom side of the package needs to be mechanically attached to the ground plane of the board for optimum thermal and RF performance. See mounting instructions for recommendation.

Simplified Device Schematic

Absolute Maximum Ratings

Parameters	Value	Unit
1 st Stage Bias Voltage (V _{D1})	35	V
2 nd Stage Bias Voltage (V _{D2})	35	V
RF Input Power	+20	dBm
Load Impedance for Continuous Operation Without Damage	5:1	VSWR
Output Device Channel Temperature	+200	°C
Operating Temperature Range	-20 to +90	°C
Storage Temperature Range	-40 to +100	°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation see typical setup values specified in the table on page one.

Note 1:

The internally generated gate voltage is thermally compensated to maintain constant quiescent current over the temperature range listed in the data sheet. No compensation is provided for gain changes with temperature. This can only be accomplished with AGC external to the module.

Note 2:

Internal RF decoupling is included on all bias leads. No additional bypass elements are required, however some applications may require energy storage on the drain leads to accommodate time-varying waveforms.

Note 3:

This module was designed to have its leads hand soldered to an adjacent PCB. The maximum soldering iron tip temperature should not exceed 700° F, and the soldering iron tip should not be in direct contact with the lead for longer than 10 seconds. Refer to app note AN060 (www.sirenza.com) for further installation instructions.

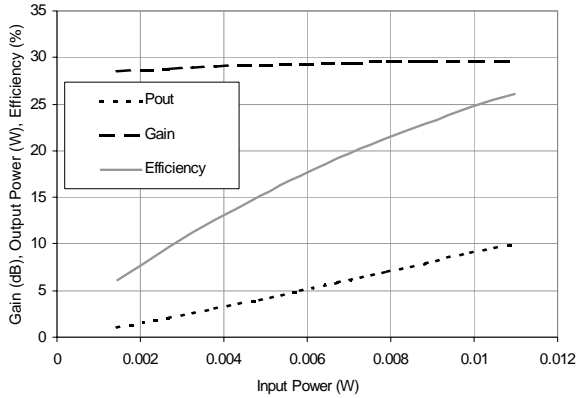

Caution: ESD Sensitive

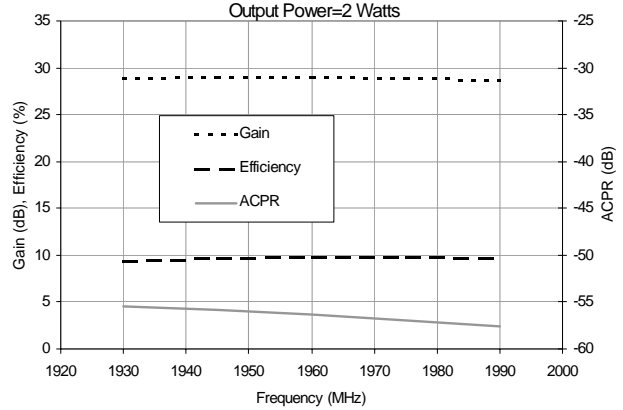

Appropriate precaution in handling, packaging and testing devices must be observed.
