

DP-Series Precision Dipole Antennas

Product Overview

TDK RF Solutions' Precision Dipole Antennas are half-wave, fixed length precision dipoles designed to generate traceable calibrated fields or to measure electric fields at their respective frequency. The DP-series antennas offer low gain and essentially perfect cross-polarization rejection, and are typically used as a reference or standard gain antenna, or as a polarization standard.

Dipole Test Sets The DP-Series Dipole Antennas are designed with operating frequencies matched the operating frequencies of common mobile radio devices, and are available in sets that correspond to communication systems used in Europe, North America, and Asia, including GSM, TDMA, PCS, Bluetooth, and others. Custom frequencies are available.

Applications

- Calibration
- Communications testing
- Antenna pattern measurements

TDK RF Solutions' Dipole Antennas are specifically designed as calibration reference sources for transmitting and receiving the optimum field strength within each antenna's respective frequency range.
