**REFERENCE DOCUMENTATION:**

The Unigen JUNO-B (UGWB1US) and JUNO-L (UGWL1US) WirelessUSB™ module adaptation of the Cypress Semiconductor CYWUSB6934 LS 2.4GHz DSSS Radio SOC and the Unigen JUNO-B (UGWB2US) and JUNO-L (UGWL2US) WirelessUSB™ module adaptation of the Cypress Semiconductor CYWUSB6935 LR 2.4GHz DSSS Radio SOC is represented in this document. The detail provided is information for using JUNO-B/L in a digital electronic device and is only a "companion" document to Cypress Semiconductors' documentation for the above noted part.

The CYWUSB6934 LS 2.4GHz DSSS Radio SOC 10-meter information and technical details (ex. register settings, timing, application interfaces, clocking and power management, etc.) may be obtained from the Cypress Semiconductor web site or contacting Cypress's authorized sales representatives.

Additional documentation for the Cypress Semiconductor CYWUSB6934 LS 2.4GHz DSSS Radio SOC device and the Unigen JUNO-B/L WirelessUSB™ modules may be obtained by contacting agents or representatives of the respective companies.

**INTRODUCTION:**

Unigen JUNO-B/L WirelessUSB™ 10 and 50-meter range modules represent the convergence of emerging wireless connectivity solutions and the USB “Plug-N-Play” ease of operation. WirelessUSB, as created by Cypress Semiconductor, is a low-cost, 2.4GHz communication protocol designed for use in commercial, industrial, consumer, and computer product applications needing highly reliable data connectivity.

JUNO-B/L modules combine Cypress Semiconductor’s wireless and USB expertise with Unigen’s module design, manufacturing, and testing proficiency to create production ready, pre-certified modules that are easily integrated into existing, and new product designs.

JUNO-B/L modules offer immediate, drop-in design solutions and use the native Operating System HID drivers to seamlessly enumerate and operate mouse, keyboard, and gaming devices, or other devices using the HID specification for communication with the host systems.

Both JUNO 10-meter and 50-meter modules use the same PCB given their form factors and may be interchanged with no other changes required in the end-device.

**FEATURES:**

- **CYWUSB6934 LS 2.4GHz DSSS Radio SOC**
- **CYWUSB6935 LR 2.4GHz DSSS Radio SOC**
- **Operates in the 2.4 to 2.483GHz, unlicensed frequency range (ISM – Industrial, Scientific and Medical)**
- **-95dBm receive sensitivity**
- **Range options of 10 and 50 meters**
- **Data Rate of 62.5kbits/sec**
- **SPI interface**  
(up to 2MHz data rate)
- **Operating Voltage Requirement**  
2.7 – 3.6Vdc
- **Multiple connection interfaces available**
- **Small PCBA Design:**  
**UGWB#US**  
0.95" (24.13mm) by 1.00" (25.40mm)  
**UGWL#US**  
0.90" (22.86mm) by 1.10" (27.94mm)
- **Complete Radio Module**  
Antenna Option – Integrated Chip or Coaxial connector (PN. – UGADL1B1M1 or UGADA0B1M1) for external mount.
- **Agency Pre-Certification (Pending)**  
**FCC/EU/ETSI/Industry Canada**  
Module certified to FCC/EU compliance specifications limiting your agency compliance time and cost.
- **Agency Pre-Certification**  
Tested to comply with Analog and Digital immunity standards from around the world

**DESCRIPTION:**

JUNO-B/L WirelessUSB™ Modules are tightly integrated, low-cost, high-reliability 2.4GHz TX/RX communications modules for use with Human Interface Device (HID) class compliant products.

The JUNO-B/L 10-meter modules use the Cypress Semiconductor CYWUSB6934 LS 2.4GHz DSSS Radio SOC device. The JUNO-B/L 50-meter modules use the Cypress Semiconductor CYWUSB6935 LR 2.4GHz DSSS Radio SOC device.

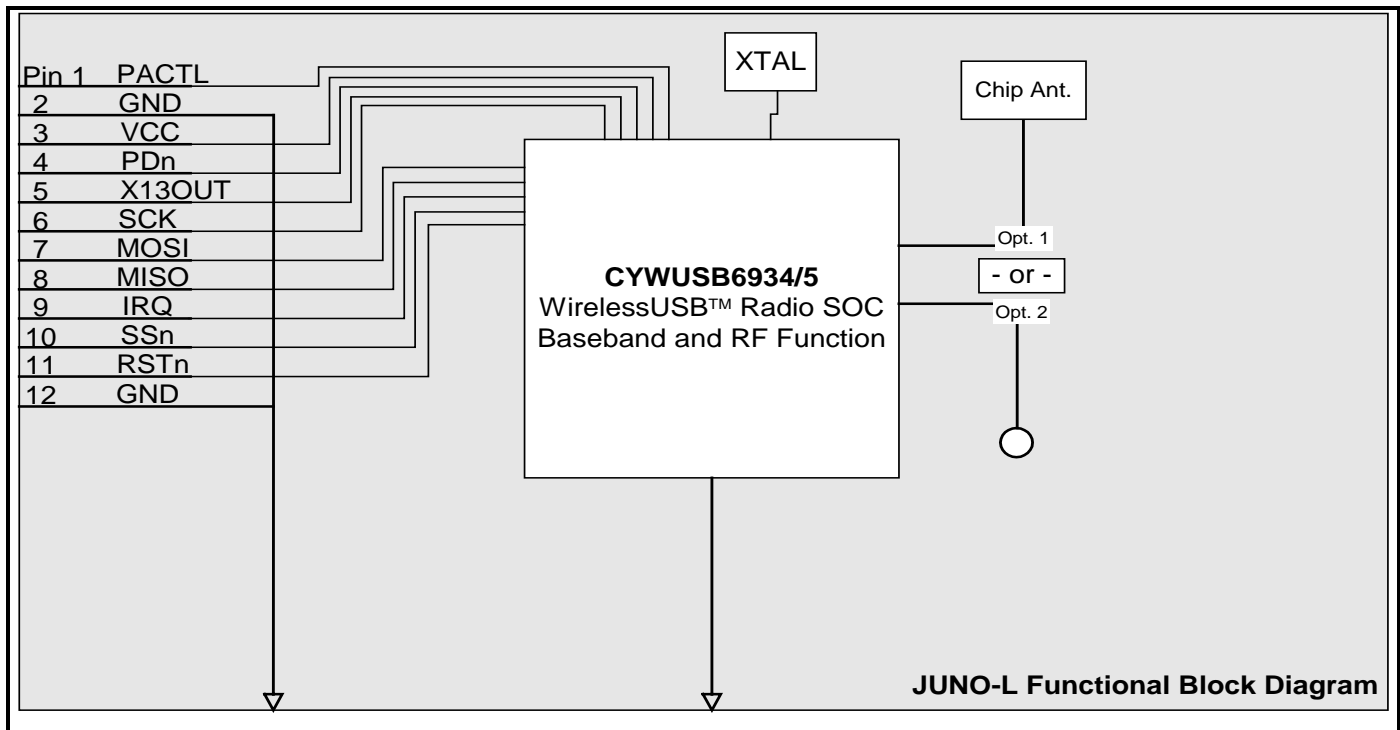

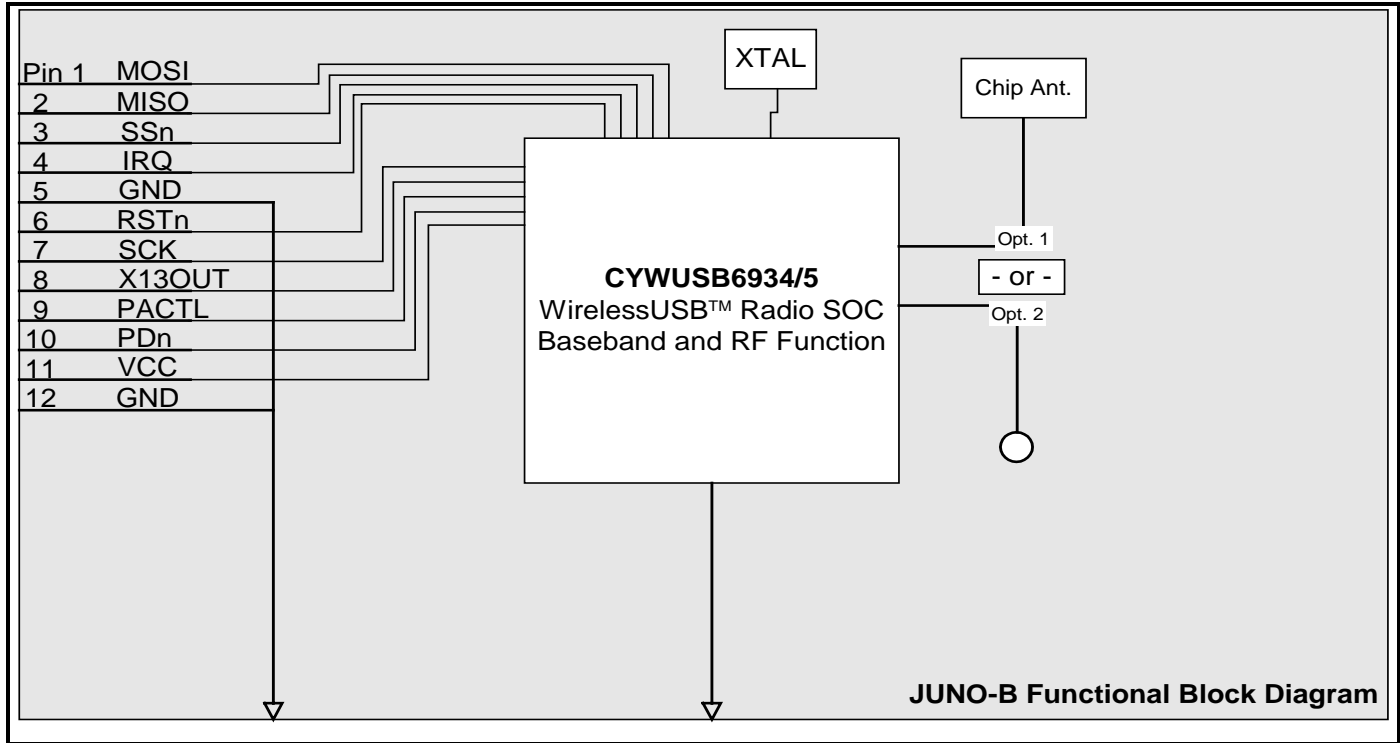

JUNO-B/L modules are a complete radio solution requiring only integration into an existing, or new device.

JUNO-B/L modules are 100% tested for functional operation and are pre-screened for FCC Part 15 compliance. The modules are supplied with an integrated chip-antenna. For applications where the chip antenna is unsuitable, models are available that support using an external coaxial antenna. Unigen offers 2dBi gain antennae for customers requiring an external antenna.

JUNO-B/L modules are intended for use in computer and consumer product/device applications and use the OS native HID class drivers to enable compliant devices. In most applications, *no additional host drivers are required*. The modules are suitable for use in embedded and/or industrial applications as well.

The JUNO-B/L are less than 1"sq and are available for horizontal or vertical mounting directly to the device PCB. The modules are available bare-board for application off board within the device.

## FUNCTIONAL BLOCK DIAGRAMS:

## ABSOLUTE MAXIMUM RATINGS:

Symbol	Definition	Min.	Max.	Unit
VCC	Supply Voltage – Radio SOC	-0.3	3.9	VDC
TOC	Commercial Operating Temperature Range	-20	70	°C
TS	Storage Temperature Range	-40	125	°C
VLI	VDC to Logic Inputs	-0.3	VCC + 0.3	VDC
V O/Hi-Z	VDC to Outputs in Hi-Z state	-0.3	VCC + 0.3	VDC
SDVD	Static Discharge Voltage Digital		>4000	VDC
SDVR	Static Discharge Voltage RF		>4000	VDC

These are stress ratings only. Exposure to stresses beyond these maximum ratings may cause permanent damage to, or affect the reliability of this module. Avoid using the module outside the recommended operating conditions defined below. This module is ESD sensitive and should be handled and/or used in accordance with proper ESD mitigation.

## RECOMMENDED OPERATING CONDITIONS:

## ANTENNA:

JUNO-B/L modules with the optional coaxial antenna connector require the addition of an antenna for radio operation. Unigen tested the noted antennae with the JUNO-B/L modules and offers these to our customers. Customers may use antennae other than these listed, however these antennae have been pre-screened with the modules for digital and RF emissions.

Customers may obtain antennae (part numbers UGADL1B1M1 or UGADA0B1M1) with the following properties:

Item	Property
Coaxial Cable Type	4.13mm high freq.
Cable Length	11.81" (300mm) – other lengths available
Connector	Mini Coaxial
Frequency Range	2.4000~2.4835GHz
Impedance	50Ω (Typ.)
VSWR	2.0 max. over full range of operation
Return Loss	-10dB max.
Gain	2.0dBi - calculated
Maximum Power	1W
Electrical Wave	½ λ Dipole

## PIN FUNCTIONS:

- MOSI:** SPI Input from MCU  
Receives commands/data from the device microcontroller.
- MISO:** SPI Output to MCU  
Transmits requests/data to the device microcontroller.
- SSn:** SPI Slave Select Enable Input  
SPI enable
- IRQ:** Interrupt Request  
The Interrupt Request Pin Select bits are used to determine the drive method of the IRQ pin
- GND:** Module Ground  
Ground to equal 0Vdc
- RSTn:** Module Reset  
Active LOW reset switch
- SCK:** SPI Input Clock
- X13OUT:** System Clock  
On-board XTL clock output of 13MHz
- PACTL:** Power Amplifier Control  
Enables/disables external power amplification circuitry, where available

- PDn:** Power Down  
Driving signal LOW will put the module in SUSPEND MODE (X13OUT = 0 when PDn is LOW)
- Vcc:** Module Input Power  
Vcc range 2.7 to 3.6Vdc

## Regulatory Compliance Statement:

The module has been pre-scanned against the relevant requirements of standards: EN 300 328, EN 301 489-17, FCC part 15 and Industry Canada RSS-210. The module is certified by the regulatory authorities in the USA and Canada and complies with the applicable essential requirements of the Radio & Telecommunication Terminal Equipment (R&TTE) directive in the EU. The module can thus be incorporated into products sold worldwide with little or no additional testing of the module itself. ***The end product must meet the appropriate technical requirements that apply to that product type but re-certification of the radio module is not required in the USA and Canada.***

In the EU, the integrator is responsible for evaluating their product type per the essential performance requirements of the R&TTE directive (except those associated with the module), declaring compliance and then notifying the member states prior to marketing the product (because the module uses a frequency band that is not harmonized in the EU). It is the responsibility of the module integrator to obtain the necessary approvals to sell products incorporating this module in other countries outside of North America and the EU. The report of measurements performed on the module in compliance with the FCC rules and EN standards can be used in these submittals (as the requirements in many other markets around the world are based in part or in whole on the standards prevalent in North America and the EU).
