SkyeModule Item-Level Developer Kit

The **SkyeModule Item-Level Developer Kit (ILDK)** provides all the tools required to develop a complete item-level RFID solution encompassing HF and/or UHF technology. Based on SkyeTek's Advanced Universal Reader Architecture (AURA), SkyeModules offer customers a high performance, secure, power-efficient solution that is embeddable in a broad range of products.

With the increasing number of item-level RFID pilots in the pharmaceutical and retail industries, the ILDK uniquely positions customers to adjust to the requirements for their target markets.

The SkyeModule Item-level Developer Kit contains:

- 1 M2-CF Module (CompactFlash form factor)
- 1 M9-CF Module (CompactFlash form factor)
- 1 Common Blade Interface Board (CBiB)
- 1 HF External Antenna
- 1 UHF External Antenna
- 1 MMCX to SMA Cable
- 1 9V Power Supply
- 1 Power Adaptor Kit
- 1 RS-232 Cable
- 1 USB 2.0 Cable
- SkyeTek Sample Tag Kit
- Demo Software
- Drivers
- Software Libraries
