

## PVO402P

Microelectronic Power IC  
HEXFET<sup>®</sup> Power MOSFET Relay  
Single Pole, Normally Open + Ring Detector  
0-400V, 120mA AC/DC

### General Description

The PVO402P Photovoltaic Relay is a dual-pole, normally open solid-state relay plus ring detector. By integrating these two functions in one package it can replace two discrete components, i.e., a relay and an AC-input opto-coupler. The relay portion of PVO402P utilizes International Rectifier's HEXFET power MOSFET as the output switch, driven by an integrated circuit photovoltaic generator of novel construction. The output switch is controlled by radiation from a GaAlAs light emitting diode (LED) which is optically isolated from the photovoltaic generator. The ring detector portion of PVO402P has two LEDs in inverse parallel connection as the input sensing element and a silicon NPN photo-transistor as the output switch.

PVO402P is ideally suited for PCMCIA fax/modem cards. Its extremely low profile allows it to be used in Type II cards whose outer shells are only 5mm thick. PVO402P Relays are packaged in an 8-pin, molded 'Thin-Pak' DIP package with 'gull-wing' surface mount terminals. It is available in plastic shipping tubes or on tape-and-reel. Please refer to Part Identification (opposite) for details.

### Applications

- On/Off Hook switch
- Dial pulsing
- Ringer injection
- Ring detection
- Loop current detection

### Features

- HEXFET Power MOSFET output
- Bounce-free operation
- 3,750 V<sub>RMS</sub> I/O Isolation
- Linear AC/DC operation
- Solid-State reliability
- UL recognized and BABT certified

### Part Identification

PVO402P surface-mount, plastic shipping tube  
PVO402P-T surface-mount, tape and reel
