Precautions

■ CORRECT USE

When using the H3YN in any place where the ambient temperature is more than 50°C, supply 90% to 110% of the rated voltages (at 12 VDC: 95% to 110%).

Do not leave the H3YN in time-up condition for a long period of time (for example, more than one month in any place where the ambient temperature is high), otherwise the internal parts may become damaged. Therefore, the use of the H3YN with a relay as shown in the following circuit diagram is recommended.

The H3YN must be disconnected from the socket when setting the DIP switch, otherwise the user may touch a terminal imposed with a high voltage and get an electric shock.

Do not connect the H3YN as shown in the following circuit diagram on the right hand side, otherwise the H3YN's internal contacts different from each other in polarity may become short-circuited.

Use the following safety circuit when building a self-holding circuit with the H3YN and an auxiliary relay, such as an MY Relay, in combination.

In the case of the above circuit, the H3YN will be in pulse operation.

Do not set to the minimum setting in the repeat-cycle modes, or the contact may become damaged.

Be careful not to apply any voltage to the terminal screws on the back of the timer. Mount the product so that the screws will not come in contact with the panel or metal parts.

Do not use the H3YN in places where there is excessive dust, corrosive gas, or direct sunlight.

Do not mount more than one H3YN closely together, otherwise the internal parts may become damaged. Make sure that there is a space of 5 mm or more between any adjacent H3YN Models.

The internal parts may become damaged if a supply voltage other than the rated ones is imposed on the H3YN.

■ PRECAUTIONS FOR VDE CONFORMANCE

The H3YN as a built-in timer conforms to VDE 0435/P2021 provided that the following conditions are satisfied.

Handling

Do not touch the DIP switch while power is supplied to the H3YN.

Before dismantling the H3YN from the socket, make sure that no voltage is imposed on any terminal of the H3YN.

Wiring

The power supply for the H3YN must be protected with equipment such as a breaker approved by VDE.

Only a load with basic isolation can be connected to the output contact. The H3YN is a model with basic isolation. Therefore, the H3YN and the load will ensure reinforced isolation, thus meeting VDE standards.

Insulation requirement: Overvoltage category II, pollution degree 2 (with a clearance of 1.5 mm and a creepage distance of 2.5 mm at 240 VAC)

There must be no difference in polarity between any output terminals next to each other of the H3YN-4 or H3YN-41, H3YN-4Z, H3YN-41-Z.

NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.
