DATA SHEET

Product specification Supersedes data of 8th March 2001 File under BCcomponents, BC08

2001 Jul 13

### PR01/02/03

#### FEATURES

- High power in small packages
- Different lead materials for different applications
- Defined interruption behaviour.

#### APPLICATIONS

• All general purpose power applications.

### QUICK REFERENCE DATA

#### DESCRIPTION

A homogeneous film of metal alloy is deposited on a high grade ceramic body. After a helical groove has been cut in the resistive layer, tinned connecting wires of electrolytic copper or copper-clad iron are welded to the end-caps. The resistors are coated with a red, nonflammable lacquer which provides electrical, mechanical and climatic protection. This coating is not resistant to aggressive fluxes. The encapsulation is resistant to all cleaning solvents in accordance with "MIL-STD-202E, method 215", and "IEC 60068-2-45".

|   | VALUE                                 |                               |                            |                               |                            |  |  |

### Notes

- 1. PR01 pitch 12.5 mm.
- 2. PR02 pitch 15.0 mm.
- 3. PR03 pitch 20.0 mm.

## Ordering code (12NC)

- The resistors have a 12-digit ordering code starting with 23.
- The first 7 digits indicate the resistor type and packaging; see Tables 1 and 2.
- The remaining 3 digits indicate the resistance value:
  - The first 2 digits indicate the resistance value.
  - The last digit indicates the resistance decade in accordance with Table 3.

### FUNCTIONAL DESCRIPTION

### **Product characterization**

Standard values of nominal resistance are taken from the E24 series for resistors with a tolerance of  $\pm 5\%$ . The values of the E24 series are in accordance with *"IEC publication 60063"*.

| 10 to 97.6 kΩ         | 3          |
| 100 to 976 k $\Omega$ | 4          |
| 1 MΩ                  | 5          |

#### Ordering example

The ordering code for resistor type PR02 with Cu leads and a value of 750  $\Omega$ , supplied on a bandolier of 1000 units in ammopack, is: 2322 194 13751.

|      | FeCu          | $1 \ \Omega \leq R$ |  | 2.5                   |

#### **Limiting values**

### Note

1. The maximum voltage that may be continuously applied to the resistor element, see "IEC publication 60115-1".

The maximum permissible hot-spot temperature is 205 °C for PR01, 220 °C for PR02 and 250 °C for PR03.

#### Derating

The power that the resistor can dissipate depends on the operating temperature; see Fig.4.

### MECHANICAL DATA

#### Mass per 100 units

| ТҮРЕ | LEAD<br>MATERIAL | MASS<br>(g) |
|------|------------------|-------------|
| PR01 | Cu               | 29          |
|      | FeCu             | 29          |
| PR02 | Cu               | 63          |
|      | FeCu             | 45          |
| PR03 | Cu               | 110         |
|      | FeCu             | 100         |

#### Mounting

The resistors are suitable for processing on automatic insertion equipment and cutting and bending machines.

### Marking

The nominal resistance and tolerance are marked on the resistor using four coloured bands in accordance with IEC publication 60062, "Colour codes for fixed resistors".

#### Outlines

The length of the body  $(L_1)$  is measured by inserting the leads into holes of two identical gauge plates and moving these plates parallel to each other until the resistor body is clamped without deformation (*"IEC publication 60294"*).

### PR01/02/03

#### TESTS AND REQUIREMENTS

Essentially all tests are carried out in accordance with the schedule of *"IEC publication 60115-1"*, category LCT/UCT/56 (rated temperature range: Lower Category Temperature, Upper Category Temperature; damp heat, long term, 56 days). The testing also covers the requirements specified by EIA and EIAJ.

The tests are carried out in accordance with IEC publication 60068-2, *"Recommended basic climatic and mechanical robustness testing procedure for electronic components"* and under standard atmospheric conditions according to *"IEC 60068-1"*, subclause 5.3.

In Table 7 the tests and requirements are listed with reference to the relevant clauses of

*"IEC publications 60115-1 and 60068-2";* a short description of the test procedure is also given. In some instances deviations from the IEC recommendations were necessary for our method of specifying.

All soldering tests are performed with mildly activated flux.
