

## DN6853

Hall IC (Operating Supply Voltage Range  $V_{CC}=3.6$  to 16V, Operating in Alternative Magnetic Field)

### ■ Overview

The DN6853 is an integrated circuit making use of Hall effects. It is designed particularly for operating at a low supply voltage with the alternating field. It is suitable for various sensors and contactless switches.

### ■ Features

- Wide range of supply voltage : 3.6 to 16V
- Operating in alternative magnetic field.
- TTL and MOS ICs directly drivable by output
- Semipermanent service life because of no contact parts
- Drivable with a small magnet
- 3-pin SIL plastic package (3-SIP)
- Open collector

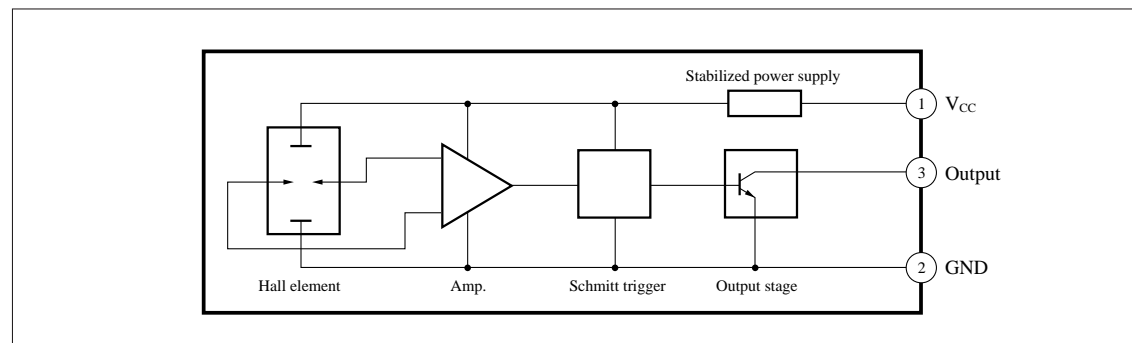

### ■ Applications

- Speed sensors
- Position sensors
- Rotation sensors
- Keyboard switches
- Microswitches

Note) This IC is not suitable for car electrical equipments.

### ■ Block Diagram

### ■ Absolute Maximum Ratings ( $T_a=25^{\circ}\text{C}$ )

Parameter	Symbol	Rating	Unit
Supply voltage	$V_{CC}$	18	V
Supply current	$I_{CC}$	8	mA
Circuit current	$I_o$	20	mA
Power dissipation	$P_D$	100	mW
Operating ambient temperature	$T_{opr}$	-40 to +85	$^{\circ}\text{C}$
Storage temperature	$T_{stg}$	-55 to +125	$^{\circ}\text{C}$

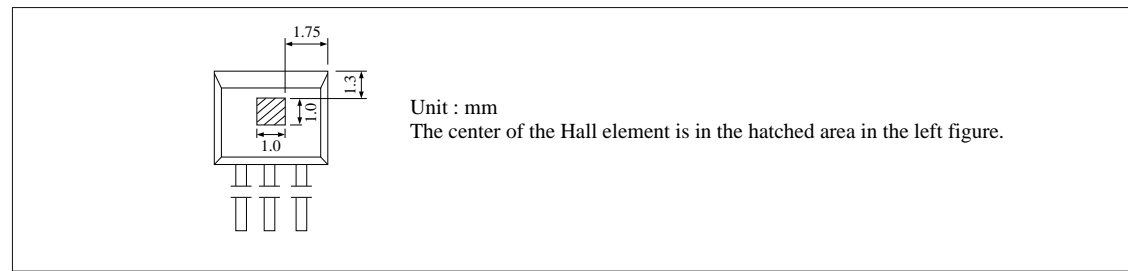

## ■ Electrical Characteristics (Ta=25°C)

Parameter	Symbol	Condition	min	typ	max	Unit
Operating flux density	$B_1$ (L to H)	$V_{CC}=12V$	-30	—	—	mT
	$B_2$ (H to L)	$V_{CC}=12V$	—	—	30	mT
Low output voltage	$V_{OL}$	$V_{CC}=16V, I_O=12mA,$ $B=30mT$	—	—	0.4	V
		$V_{CC}=3.6V, I_O=12mA,$ $B=30mT$	—	—	0.4	V
High output current	$I_{OH}$	$V_{CC}=16V, V_O=18V,$ $B=-30mT$	—	—	10	$\mu A$
		$V_{CC}=3.6V, V_O=18V,$ $B=-30mT$	—	—	10	$\mu A$
Supply current	$I_{CC}$	$V_{CC}=16V$	—	—	6	mA
		$V_{CC}=3.6V$	—	—	5.5	mA

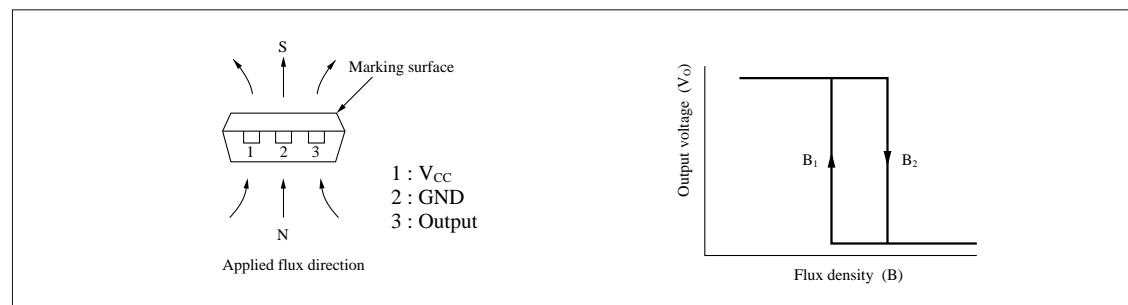

Note 1) Operating supply voltage range  $V_{CC}$  (opr)= 3.6 to 16V

Note 2) For the operating flux density,  $\pm 200$  mT is also available as Rank A.

## ■ Hall Element Position

## ■ Flux-Voltage Conversion Characteristics

## ■ Precaution on Use

1. Change of the operation magnetic flux density dose not depend on the supply voltage, because the stabilization power supply is built-in.  
(only for the range;  $V_{CC}=4.5$  to 16V)
2. Change from "H" to "L" level increases the supply current by approx. 1mA.
