

## Uni- and Bipolar Hall IC Switches for Magnetic Field Applications

TLE 4905 G; TLE 4935 G  
TLE 4935-2 G; TLE 4945-2 G

Bipolar IC

### Features

- Temperature compensated magnetic performance
- Digital output signal
- For unipolar and alternating magnetic fields
- Large temperature range
- Protection against reversed polarity
- Output protection against electrical disturbances

Type	Ordering Code	Package
TLE 4905 G	Q62705-K402	SOT-89
TLE 4935 G	Q62705-K404	SOT-89
TLE 4935-2 G	Q62705-K405	SOT-89
TLE 4945-2 G	Q62705-K403	SOT-89

TLE 4905/35/35-2/45-2 (Unipolar/Bipolar Magnetic Field Switches) have been designed specifically for automotive and industrial applications. Reverse polarity protection is included on-chip as is output protection against negative voltage transients.

Typical applications are position/proximity indicators, brushless DC motor commutation, rotational indexing etc.

### Circuit Description

The circuit includes Hall generator, amplifier and Schmitt-Trigger on one chip. The internal reference provides the supply voltage for the components. A magnetic field perpendicular to the chip surface induces a voltage at the hall probe. This voltage is amplified and switches a Schmitt-trigger with open-collector output. A protection diode against reverse power supply is integrated.

The output is protected against electrical disturbances.

### Functional Description Unipolar Type TLE 4905 (Figure 3 and 4)

When a positive magnetic field is applied in the indicated direction (Figure 3) and the turn-on magnetic induction  $B_{OP}$  is exceeded, the output of the Hall-effect IC will conduct (Operate Point). When the magnetic field is reduced to a value smaller than the release point, the output of the IC turns off (Release Point; Figure 4).

Figure 3 Sensor/Magnetic-Field Configuration

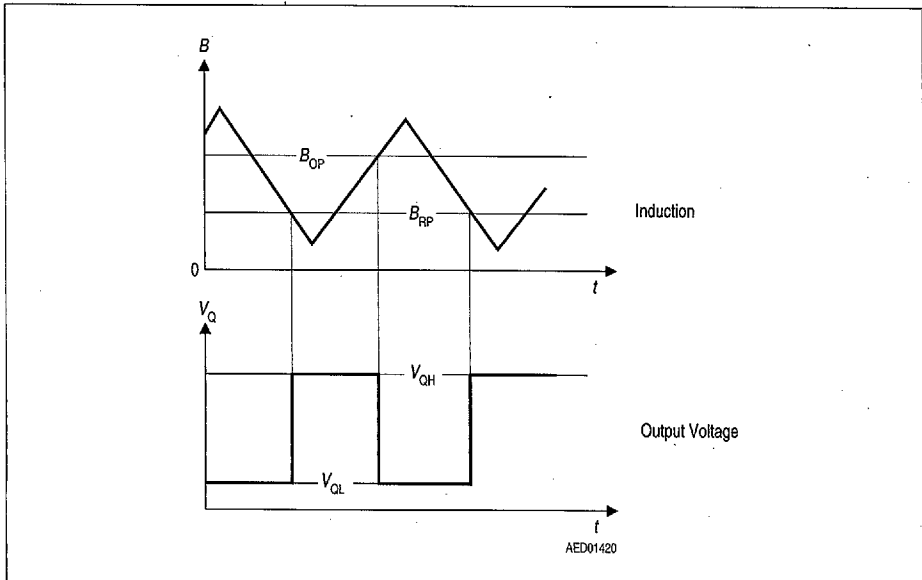

Figure 4 Switching Characteristics Unipolar Type

**Functional Description Bipolar Type TLE 4935/35-2/45-2 (Figure 5 and 6)**

When a positive magnetic field is applied in the indicated direction (**Figure 5**) and the turn-on magnetic induction  $B_{OP}$  is exceeded, the output of the Hall-effect IC will conduct (Operate Point). The output state does not change unless a reverse magnetic field exceeding the turn-off magnetic induction  $|B_{RP}|$  is exceeded. In this case the output will turn off (Release Point; **Figure 6**).

### Absolute Maximum Ratings

$T_j = -40$  to  $150$  °C

Parameter	Symbol	Limit Values		Unit	Remarks
		min.	max.		
Supply voltage	$V_S$	-40	32	V	-
Supply voltage	$V_S$	-	40	V	$t < 400$ ms; $v = 0.1$
Output voltage	$V_Q$	-	32	V	-
Output current	$I_Q$	-	100	mA	-
Output reverse current	$-I_Q$	-	100	mA	-
Junction temperature	$T_j$	-40	150	°C	-
Storage temperature	$T_{stg}$	-50	150	°C	-
Thermal resistance	$R_{th,JA}$		100	K/W	-

*Note: Stresses above those listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

### Operating Range

Parameter	Symbol	Limit Values		Unit	Remarks
		min.	max.		
Supply voltage	$V_S$	4.0	18	V	-
Junction temperature	$T_j$	-40	125	°C	-

*Note: In the operating range the functions given in the circuit description are fulfilled.*

### AC/DC Characteristics

$4.0\text{ V} \leq V_S \leq 24\text{ V}$ ;  $-40\text{ }^\circ\text{C} \leq T_j \leq 150\text{ }^\circ\text{C}$

Parameter	Symbol	Limit Values			Unit	Test Condition	Test Circuit
		min.	typ.	max.			
Supply current	$I$	1.6	–	5.0	mA		1
	$I_{\text{SHigh}}$	–	2.5	–	mA	$B < B_{\text{RP}}$	1
	$I_{\text{SLow}}$	–	3.5	–	mA	$B > B_{\text{OP}}$	1
Output saturation voltage	$V_{\text{QSat}}$	–	0.25	0.5	V	$I_{\text{Q}} = 40\text{ mA}$	1
Output leakage current	$I_{\text{QL}}$	–	–	10	$\mu\text{A}$	$V_{\text{Q}} = 18\text{ V}$	1
Rise/fall time	$t_r / t_f$	–	–	1	$\mu\text{s}$	$R_L = 1.2\text{ k}\Omega$ $C_L \leq 33\text{ pF}$	1

*Note: The listed characteristics are ensured over the operating range of the integrated circuit. Typical characteristics specify mean values expected over the production spread. If not otherwise specified, typical characteristics apply at  $T_j = 25\text{ }^\circ\text{C}$  and the given supply voltage.*

*Note: Moderate changes may occur during the development process or customer discussion.*
