IS474

Linear Output Type OPIC Light Detector

■ Features

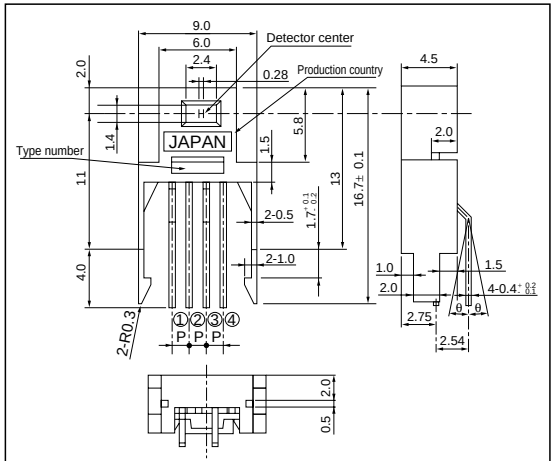
1. Linear output conforming to illuminance
   (50 lx to 50000 lx)
2. Conforming to required visual sensitivity characteristics by means of built-in filter
   Peak sensitivity wavelength : TYP. 550 nm
3. Not dependent on kind of light source such as incandescent lamp and fluorescent lamp
4. Easy-to-mount holder-integral side view type

■ Applications

1. TV sets
2. CRTs of personal computers and others

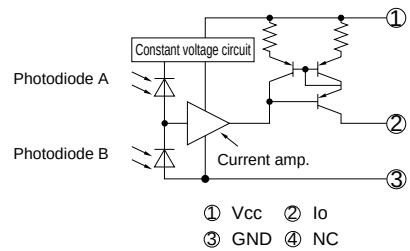
■ Outline Dimensions

(Unit : mm)



* Unspecified tolerance : ± 0.2
* ( ) : Reference dimensions
* Lead pitch (P) : 1.27 (at lead root)
* Lead deflection angle θ : ± 10° MAX.

Internal connection diagram



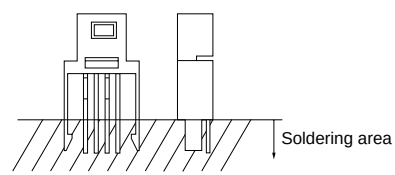
* OPIC (Optical IC) is a trademark of SHARP corporation. An OPIC consists of a light-detecting element and signal-processing circuit integrated onto a single chip.

■ Absolute Maximum Ratings

(Ta=25˚C)

Parameter	Symbol	Rating	Unit
Supply voltage	V_{CC}	-0.5 to 8	V
Output current	I_O	-10	mA
Output voltage	V_O	-0.5 to V_{CC}	V
Power dissipation	P	150	mW
Operating temperature	T_{opr}	-25 to +85	˚C
Storage temperature	T_{stg}	-40 to +85	˚C
*1 Soldering temperature	T_{sol}	260	˚C

*1 For MAX. 3 seconds at the position shown in the right drawing



" In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest version of the device specification sheets before using any SHARP's device."

■ Recommended Operating Conditions

Parameter	Symbol	MIN.	MAX.	Unit
Supply voltage	V_{CC}	4.5	5.5	V
Illuminance	E_V *1	100	50 000	lx
Output voltage	V_O	0	V_{CC} - 1.5	V
Operating temperature	T_{opr}	- 10	70	˚C

*1 CIE standard light source A (tungsten lamp)

■ Electro-optical Characteristics

(Vcc=5V, Ta=25˚C)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit	Test circuit
Supply current	Icc	*1 Ev= 0 lx	0.2	0.55	1.0	mA	1
Output current 1	I_{O1}	*1 Ev= 100 lx	- 6.0	-10	- 14	μA	2
Output current 2	I_{O2}	*1 Ev= 1000 lx	- 60	-100	- 140	μA	2
Output current ratio 1	RI_{O1}	Io_2/Io_1	9.0	10	11	-	-
Output current 3	I_{O3}	*2 Ev= 100 lx	-	-11	-	μA	2
Output current 4	I_{O4}	*3 Ev= 100 lx	-	-10	-	μA	2
Output current ratio 2	RI_{O2}	Io_3/Io_4	(0.9)	(1.1)	(1.3)	-	-
Dark output current	Iod	*1 Ev= 0 lx	-	-10	- 500	nA	2
Peak sensitivity wavelength	λp	-	-	(550)	-	nm	-
Response time (rise)	t_r	R_L= 3.3kΩ	-	12	-	μs	3
Response time (fall)	t_f	R_L= 3.3kΩ	-	30	-	μs	3
*4 Power source fluctuation removability	PSRR1	Ev= 0 lx, R_L= 3.3kΩ at 10kHz	-	48	-	dB	-
	PSRR2	Ev= 0 lx, R_L= 3.3kΩ at 100kHz	-	39	-	dB	-
	PSRR3	Ev=1000 lx, R_L= 3.3kΩ at 10kHz	-	11	-	dB	-

*1 Illuminance by CIE standard light source A (tungsten lamp)

*2 Illuminance by incandescent lamp

*3 Illuminance by fluorescent lamp

*4 Power source fluctuation removability PSRR is defined according to the following formula.

$$PSRR = 20\log \frac{\text{Vcc ripple voltage}}{\text{Vo ripple voltage}}$$

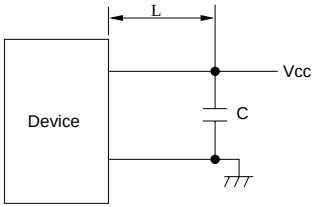
■ Precautions for Operation

(1) It is recommended to connect a capacitor between V_{CC} and GND near the device in order to stabilize power supply line



L <= 20 mm
C >= 0.01μF

2 pieces of photodiodes are built in this device to amplify difference in collector current between them.
Radiation of even light to 2 pieces of photodiodes is recommended.
Radiation of uneven light may cause change of spectral sensitivity or starting failure of the circuit after power is supplied.

(2) Cleaning

- Conduct cleaning as follows.

Solvent dip cleaning : Solvent temperature of 45˚C max., dipping time : Within 3 minutes

Ultrasonic cleaning : Elements are affected differently depending on the size of cleaning bath, ultrasonic output, time, size of PWB and mounting method of elements. Conduct trial cleaning on actual operating conditions in advance to make sure that no problem results.

- Use following solvents only.

Solvents : Ethyl alcohol, methyl alcohol and isopropyl alcohol

(3) Soldering

Be sure to perform soldering at values within the maximum ratings. Take care so that not external force is applied to the lead during and immediately after soldering. Do not perform reflow soldering.

● Please refer to the chapter "Precautions for Use". (Page 78 to 93)

NOTICE

- The circuit application examples in this publication are provided to explain representative applications of SHARP devices and are not intended to guarantee any circuit design or license any intellectual property rights. SHARP takes no responsibility for any problems related to any intellectual property right of a third party resulting from the use of SHARP's devices.
- Contact SHARP in order to obtain the latest device specification sheets before using any SHARP device. SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structure, and other contents described herein at any time without notice in order to improve design or reliability. Manufacturing locations are also subject to change without notice.
- Observe the following points when using any devices in this publication. SHARP takes no responsibility for damage caused by improper use of the devices which does not meet the conditions and absolute maximum ratings to be used specified in the relevant specification sheet nor meet the following conditions:

(i) The devices in this publication are designed for use in general electronic equipment designs such as:
— Personal computers
— Office automation equipment
— Telecommunication equipment [terminal]
— Test and measurement equipment
— Industrial control
— Audio visual equipment
— Consumer electronics

(ii) Measures such as fail-safe function and redundant design should be taken to ensure reliability and safety when SHARP devices are used for or in connection with equipment that requires higher reliability such as:
— Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
— Traffic signals
— Gas leakage sensor breakers
— Alarm equipment
— Various safety devices, etc.

(iii) SHARP devices shall not be used for or in connection with equipment that requires an extremely high level of reliability and safety such as:
— Space applications
— Telecommunication equipment [trunk lines]
— Nuclear power control equipment
— Medical and other life support equipment (e.g., scuba).

- Contact a SHARP representative in advance when intending to use SHARP devices for any "specific" applications other than those recommended by SHARP or when it is unclear which category mentioned above controls the intended use.
- If the SHARP devices listed in this publication fall within the scope of strategic products described in the Foreign Exchange and Foreign Trade Control Law of Japan, it is necessary to obtain approval to export such SHARP devices.
- This publication is the proprietary product of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.
- Contact and consult with a SHARP representative if there are any questions about the contents of this publication.
