

BCS2015H1 is the photodiode which uses an amorphous silicone semiconductor on the plastic substrate. It is the most suitable for Brightness Adjustment, Control of the Lighting systems, and some light sensing. BCS2015H1 is for conventional surface mounting.

**Features**

- Ultra Low profile (less than 0.3mm thickness)
- Highly receptive to visible light but not receptive to infrared light (close to Human eye visibility).
- Accurate illumination measurement can be taken without the use of an infrared filter.  
(Phototransistors and photodiodes that use crystal- silicon semiconductors typically require this filtering.)
- Surface mounting can be used in lead- free reflow soldering.

## Recommended land pattern

Recommended land pattern is shown in Fig. Please arrange a land in the direction as shown in Fig. to the direction of curvature as the result of heat stress by reflow and/or physical stress.

## Recommended reflow heat condition
