

- These thru-hole (tubular) receptacles are designed for hand, wave or reflow\* soldering. The *ORGANIC FIBRE PLUG<sup>®</sup>* barrier prevents solder, paste or flux from contaminating the spring contact.
- After soldering, the *OFFP<sup>®</sup>* barrier is pushed out of the receptacle when the device is plugged in.
- All parts are available as discrete receptacles; but for SMT assembly, certain receptacles are supplied on carrier tape per EIA-481 to feed industry standard pick and place machines.

\*Intrusive reflow (also called "pin-in-paste") is a technique of using conventional thru-hole components in a reflow soldering process. The receptacles are placed into plated-thru-holes in the circuit board (solder paste has previously been screen printed on pads adjacent to the holes) and the board is reflowed in the same pass as other SMT components. Solder will fill the plated-thru-holes and achieve solder joints as reliable as wave soldering. The *OFFP<sup>®</sup>* barrier prevents solder paste from being picked-up inside the contact during pick 'n place assembly. "Overprinting" paste on the solder mask can be used to adjust the volume of paste required to fill each hole.
