Moisture Barrier Bag 3370

The 3M™ Moisture Barrier Bag 3370 has been designed to meet the demanding moisture protection needs of the electronics market.

- **Durability** – The 3370 bag utilizes a multi-layer 3.6 mil film design that provides puncture and tear resistance. Proven reliability in vacuum packaging applications.
- **Moisture Protection** – The 3370 bag provides proven long-term protection in the most critical seepage area – the seams. 3M provides a 1/2" side seam to deliver a finished bag capable of maintaining the MVTR level equivalent to that of the film. The 3370 bag's multi-layer design eliminates problems associated with "pinholes" found in many foil bags.
- **ESD/EMI shielding** – The 3370 bag provides excellent high frequency protection and static shielding to protect the most sensitive parts.
- **Cleanliness** – The 3370 bag uses a clean opaque barrier film which exceeds the requirements of EIA-583 Class I and contains no amines, amides or N-Octanoic Acid. Outgassing levels are extremely low.
- **Construction** – The 3370 bag is a highly durable construction (from the outside layer to the innermost layer): static dissipative layer, two aluminized polyester layers each 0.48 mil, 2.6 mil static dissipative polyethylene.
- **Industry Standards** – The 3370 bag meets the electrical and physical requirements of JESD 625A, MIL-PRF-81705, Type 1, EN100015, IEC61340-5-1.

The 3370 bag is available in many standard sizes and can be custom-sized for your specific application.

3M™ Moisture Barrier Bag 3370

Physical Properties	Test Method	Typical Value
Thickness	Measure	3.6 mils (92 microns)±10%
Moisture Vapor Transmission Rate	ASTM F 1249	< 0.015 grams/100 inches ² /24 hours (645.2 cm ²) (film and seams)
Tensile Strength	ASTM D 882	> 8200 psi
Puncture Resistance	FTMS 101C Method 2065	> 20 lbs. (9.07 kg)
Seam Strength	Mil PRF 81705(D)	Pass (3.5 lb./1.6 kg Hanging weight)
Electrical Properties	Test Method	Typical Value
Surface Resistance (Interior and Exterior)	ANSI/ESD S 11.11	<1 x 10 ¹¹ ohms @12% R.H.
Metal Layer	Monroe 267 Buried Layer	< 100 ohms
Static Discharge Shielding	ANSI/ESD S 11.31	< 4 nJ
Chemical Properties	Test Method	Typical Value
Outgassing	Static Headspace	<10µg/g Total < 1µg/g Hydrocarbons
Ionic Contamination	Extraction/IC	<20ng/cm ² : Na, F, PO ₄ , SO ₄ , Cl, NH ₄ <100 ng/cm ² : NO ₃
Non Volatile Residue	ASTM E 1235 (reference)	<1 µg/cm ²
Polycarbonate Compatibility	EIA 564	Pass - 185°F (85°C), 3400 psi
Amines, Amides, Silicone	FTIR/NMR	None Added
