

What can I use to clean my plasma screen?

Clean your most expensive screens with confidence.

- Microfiber
- 100% safe
- Lint free
- Machine washable

Plasma Screen Cleaning Cloth (MG Cat. No. 8280)

Screen cleaning instructions:

1. Review your owner's manual for cleaning instructions.
2. Use only a microfiber cloth. Do not use wood-based products such as paper towels or toilet paper, they could scratch the screen.
3. Do not use ammonia or alcohol-based cleaners such as Windex, 409 or others. They could damage the anti-reflective coating on the glass.
4. Try first wiping it dry with the microfiber cloth.
5. If problem persists, dampen (water only) cloth to clean.
6. Some manufactures recommend using mild soap, but do not do this unless your manufacturer recommends it.

Why microfiber?

Microfiber is fiber with strands less than one *denier**. Microfiber is the perfect blend of polyester and polyamide. Fabrics made with microfibers are exceptionally soft and hold their shape well. When high quality microfiber is combined with the right knitting process, it creates an extremely effective cleaning material. This material can hold up to seven times its weight in water. They are also used for some cleaning applications, because of their exceptional ability to absorb oils.

Source: Wikipedia

* Denier is a unit of measure for the linear mass density of fibers. It is defined as the mass in grams per 9,000 meters.
