## Rl-21 Series Dry Reed Switch

## RI-21 Series

Micro dry-reed switch hermetically sealed in a gas-filled envelope. Single-pole, single-throw (SPST) type, having normally open contacts, and containing two magnetically actuated reeds.

The switch is of the double-ended type and may be actuated by an electromagnet, a permanent magnet or a combination of both.

The device is intended for use in sensors, relays, pulse counters or similar devices.

## RI-21 Series Features

- General purpose reed switch
- High breakdown voltage
- Contact layers: gold, plated ruthenium
- Superior glass-to-metal seal and blade alignment
- Excellent life expectancy and reliability

## General data for all models RI-21

## AT-Customization / Preformed Leads

Besides the standard models, customized products can also be supplied offering the following options:

- Operate and release ranges to customer specification
- Cropped and/or preformed leads

## Coils

All characteristics are measured using the Philips Standard Coil. For definitions of the Philips Standard Coil, refer to "Application Notes" in the Reed Switch Technical \& Application Information Section of this catalog.

## Life expectancy and reliability

The life expectancy data given below are valid for a coil energized at 1.25 times the published maximum operate value for each type in the RI-21 series.

## No load conditions (operating frequency: 100Hz)

Life expectancy : min. $10^{8}$ operations with a failure rate of less than $10^{-9}$ with a confidence level of $90 \%$.

End of life criteria:
Contact resistance $>1 \Omega$ after 2 ms
Release time $>2 \mathrm{~ms}$ (latching or contact sticking).

## Loaded conditions (resistive load: $12 \mathrm{~V} ; 4 \mathrm{~mA}$; ( 15 mA peak); operating frequency: $\mathbf{1 7 0 ~ H z ) ~}$

Life expectancy: min. $10^{7}$ operations with a failure rate of less than $10^{-8}$ with a confidence level of $90 \%$.

End of life criteria:
Contact resistance $>2 \Omega$ after 4 ms
Release time $>0.7 \mathrm{~ms}$ (latching or contact
sticking). Switching different loads involves different life expectancy and reliability data. Further information is available on request.

## Mechanical Data

Contact arrangement is normally open; lead finish is tinned; net mass is approximately 190 mg ; and can be mounted in any position.

| Insulation Resistance (min) | RH $\leq 45 \%$ | $\mathrm{M} \Omega$ | $10^{6}$ | $10^{6}$ | $10^{6}$ | $10^{6}$ | $10^{6}$ |

## Shock

The switches are tested in accordance with "IEC 68-227 ", test Ea (peak acceleration 150 G , half sinewave; duration 11 ms ). Such a shock will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Vibration

The switches are tested in accordance with "IEC 68-2$6 "$, test Fc (acceleration 10G; below cross-over frequency 57 to 62 Hz ; amplitude 0.75 mm ; frequency range 10 to 2000 Hz , duration 90 minutes). Such a vibration will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Mechanical Strength

The robustness of the terminations is tested in accordance with "IEC 68-2-21", test $\mathrm{Ua}_{1}(\operatorname{load} 40 \mathrm{~N})$.

## Operating and Storage Temperature

Operating ambient temperature; min: $-55^{\circ} \mathrm{C}$;
$\max :+125^{\circ} \mathrm{C}$. Storage temperature; min: $-55^{\circ} \mathrm{C}$; max:
$+125^{\circ} \mathrm{C}$. Note: Temperature excursions up to $150^{\circ} \mathrm{C}$ may be permissible. For more information contact your nearest Coto Technology sales office.

## Soldering

The switch can withstand soldering heat in accordance with "IEC 68-2-20", test Tb, method 1B: solder bath at $350 \pm 10^{\circ} \mathrm{C}$ for $3.5 \pm 0.5 \mathrm{~s}$. Solderability is tested in accordance with "IEC 68-2-20", test Ta, method 3: solder globule temperature $235^{\circ} \mathrm{C}$; ageing 1 b : 4 hours steam.

## Welding

The leads can be welded.

## Mounting

The leads should not be bent closer than 1 mm to the glass-to-metal seals. Stress on the seals should be avoided. Care must be taken to prevent stray magnetic fields from influencing the operating and measuring conditions.
