NOTES

1. Fixing

1) Use 2mm mounting screws to attach switches with Max. 0.098 N·m torque. Use of screw washers or adhesive lock is recommended.

2) When the operation object is in the free position, force should not be applied directly to the actuator or to the pin plunger. Also force should be applied to the pin plunger from vertical direction to the switch.

3) In setting the movement after operation, the over-travel should be set from 70% to 100%. Setting the movement less than 70% may cause degrading of the electrical mechanical performance.

2. When specifying FJ switches, allow ±20% to the listed operating and release forces.

3. Soldering operation

1) For manual soldering: 18 W soldering iron, soldering completed within 3 seconds; do not apply force to the terminals.

2) For automatic soldering tank: 260°C immersion, completed within 5 seconds, 350°C immersion, completed within 3 seconds.

4. When switching low-level circuits, FJ low-level circuit type is recommended.
