## NOTES

### 1. Fastening of the switch body

- 1) Use flat filister head M3 screws to mount switches with less than a 0.49 N·m torque. Use of screws washers or adhesive lock is recommended to prevent loosening of the screws.
- 2) Check insulation distance between ground and each terminal.
- 3) When the operation object is in the free position, force should not be applied directly to the actuator or pin plunger. Also force should be applied to the pin plunger from vertical direction to the switch.

- 4) The standard value of overtravel should be the range of 70% to 100% of the rated O.T. value.

### 2. Soldering operations

Soldering should be accomplished in less than 5 seconds, with a 60 watt iron. Care should be taken not to apply force to the terminal during soldering.

### 3. Variance of operating characteristics

When specifying the switch, allow +20% to the listed operating and release forces.

### 4. Environment

Avoid using the switches in the following conditions;

- In corrosive gases, such as silicon gas
- In a dusty environment

### 5. For switching of inductive loads (relays, solenoids, etc.)

- 1) In order to prevent damage to contacts due to the occurrence of arcing, an arc absorbing circuit should be applied.
- 2) Care should be taken that occurrence in AC load possibly shorten the expected life.

### 6. Please assure the quality and reliability of the switch under the actual service condition.

### 7. It is recommended to use Gold clad contact type in use of low-level circuit rating.

### 8. Cover and body are press-fitted. Once it is taken apart, it may cause change of characteristics.

### 9. Cover and body are press-fitted. Once it is taken apart, it may cause change of characteristics.
