

Transistor Testers

Model 520C Industrial Transistor Tester

520C

The B+K Precision model 520C Transistor Tester is designed for in-circuit and out-of circuit transistor testing with special features for making additional tests on devices out-of circuit. The instrument is designed for a minimum amount of control manipulation, making for rapid testing of most devices.

- Determines good or bad transistors, FET's, SCR's, or diodes.
- Patented limited-energy pulse circuit permits in-circuit testing in the presence of low shunt impedance's with complete safety for the device under test.
- Easy to operate panel eliminates the need to refer to a reference or operating manual-only three switches, no panel adjustments.
- Six position test switch makes it unnecessary to know the device terminal identification.
- A LED array identifies leakage in both Silicon and Germanium devices.
- Front Panel socket for out-of -circuit transistor testing.

Model 510A

Portable Transistor Tester

The model 510A performs Good/Bad test for transistors, FET's, and SCR's. It also identifies NPN or PNP for transistors, N-channel or Pchannel for FET, FET-gate lead, all leads of transistors in LO drive, base lead in HI drive, and all leads of SCR. It uses a patented limited-energy pulse circuit, which provides highly successful in-circuit testing in the presence of low shunt

impedance's with complete safety for the device under test. The instrument is designed for a minimum amount of control manipulation, allowing for rapid testing of most devices.

510A

Rapid In-circuit and out-of circuit testing

- Good/Bad test
- **NPN** or **PNP** identification for transistors
- ■N-channel or P-channel identification for FET
- ■FET-gate and SCR lead identification

Battery operated (4 x 1.5 AA batteries)
