

FEATURES:

- ✓ Passive Oscilloscope probes feature a one piece (monolithic) design for robust probe life.
- ✓ Probe bandwidth ratings are specified as a system bandwidth. System bandwidth includes both probe and oscilloscope together as a system. The result is a probe frequency response that can essentially be considered transparent.
- ✓ For ease of use, Readout Actuator for probe attenuation sensing and a Ground Reference switch are featured on some probe models.
- ✓ Full set of accessories are included with each probe.
- ✓ All probes meets IEC1010-2-031, 300V, CAT I

Model 4550B

To determine the correct probe, select the probe that matches the frequency bandwidth of the oscilloscope. For example, if your oscilloscope has a bandwidth of 100 MHz., select a model that matches the frequency in the “System Bandwidth” column (i.e. 5795A).

- ¹ Maximum voltage allowed on the low connection including shell and housing must not exceed 30V.
² Maximum input voltages are depended on the oscilloscope input characteristics; take the lesser of the two specifications.
³ Depended on oscilloscope input characteristics (measurement based on 1M Ω , 20 pF input).
⁴ Any oscilloscope that uses the Tektronix[®] style range actuator.
⁵ Probes are switchable between 1:1 and 10:1 range.

Probes Includes:

- 1) Retractable Hook Tip
- 2) BNC Adapter
- 3) IC Adapter
- 4) Insulating Tip
- 5) Trimmer Tool
- 6) 6" Ground Lead with Alligator Clip
