

FEATURES

- RoHS compliant
- Maxim MAX250 compatible
- Isolation to 4kVrms
- Industry-standard pinout
- Surface mount option
- UL 94 V-0 package materials
- Low profile
- Toroidal construction
- Fully encapsulated
- Industrial temperature range

DESCRIPTION

The 78250 series of converter transformers are specifically designed for use with Maxim chipsets to provide isolated RS232 interfaces. Carefully controlled turns ratios ensure consistent performance whilst a toroidal construction minimises EMI.

78250 Series

MAX250 Compatible Converter Transformers

CHARACTERISTICS 78250C/78250MC

Parameter	Conditions	Min.	Typ.	Max.	Units
Primary Inductance, L_p	10kHz, 100mV	1.0	2.0	2.5	mH
Leakage Inductance, L_L	100kHz, 100mV		2.0	3.0	μ H
Interwinding Capacitance, C_{ww}	100kHz, 100mV		69	90	pF
Primary D.C. Resistance, R_{dc}	<0.1VDC		1.0	2.0	Ω
Volt-time Product, Et	Pins1/2 or 2/3	50			V μ s

CHARACTERISTICS 78250VC/78250MVC

Parameter	Conditions	Min.	Typ.	Max.	Units
Primary Inductance, L_p	10kHz, 100mV	1.0	2.0	2.5	mH
Leakage Inductance, L_L	100kHz, 100mV		35	40	μ H
Interwinding Capacitance, C_{ww}	100kHz, 100mV		9	12	pF
Primary D.C. Resistance, R_{dc}	<0.1VDC		1.4	1.8	Ω
Volt-time Product, Et	Pins1/2 or 2/3	50			V μ s

ORDER CODE DETAILS

Order Code	Package Type	Packaging Type	Quantity
78250C / 78250VC	6 Pin DIL	Tube	50
78250MC / 78250MVC	6 Pin SM	Tube	50
78250MC-R / 78250MVC-R	6 Pin SM	Tape & Reel	500

ABSOLUTE MAXIMUM RATINGS

Operating free air temperature range	-40°C to 85°C
Storage temperature range	-50°C to 125°C
Lead temperature 1.5mm from case for 10 seconds	300°C
Peak current, I_{pk}	300mA
Isolation voltage 78250(M)C (flash tested for 1 second)	1.5kVrms
Isolation voltage 78250V(M)C (flash tested for 1 second)	4.0kVrms

All specifications typical at $T_A = 25^\circ\text{C}$

TECHNICAL NOTES

ISOLATION VOLTAGE

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

All products in this series are 100% production tested at their stated isolation voltage.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

For a part holding no specific agency approvals both input and output should normally be maintained within SELV limits i.e. less than 42.4V peak, or 60VDC. The isolation test voltage represents a measure of immunity to transient voltages and the part should never be used as an element of a safety isolation system. The part could be expected to function correctly with several hundred volts offset applied continuously across the isolation barrier; but then the circuitry on both sides of the barrier must be regarded as operating at an unsafe voltage and further isolation/insulation systems must form a barrier between these circuits and any user-accessible circuitry according to safety standard requirements.

REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. This series has toroidal isolation transformers, with no additional insulation between primary and secondary windings of enameled wire. While parts can be expected to withstand several times the stated test voltage, the isolation capability does depend on the wire insulation. Any material, including this enamel (typically polyurethane) is susceptible to eventual chemical degradation when subject to very high applied voltages thus implying that the number of tests should be strictly limited. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

This consideration equally applies to agency recognized parts rated for better than functional isolation where the wire enamel insulation is always supplemented by a further insulation system of physical spacing or barriers.

PACKAGE SPECIFICATIONS

MECHANICAL DIMENSIONS

6 Pin DIL

6 Pin SM

Unless otherwise stated all dimensions in inches (mm) ± 0.01 (0.25).
All pins on a 0.1 (2.54) pitch and within ± 0.01 (0.25) of true position.
*Pin 5 is connected to secondary center tap. Package Weight 1.0g TYP.

RECOMMENDED FOOTPRINT DETAILS

6 Pin DIL

6 Pin SM

Unless otherwise stated all dimensions in inches (mm) ± 0.01 (0.25). All pins on a 0.1 (2.54) pitch and within ± 0.01 (0.25) of true position.

TUBE OUTLINE DIMENSIONS

SOLDERING INFORMATION¹

Pin finish	Pure tin dip
Peak wave solder temperature	300°C for 10 seconds
Peak reflow temperature	220°C
